

Alamo Square

Page St Neighborway - Pilot Discussion Map

1. Webster/Page Street

Potential Variant/Addition:
Right-turn only (SRL) via near-side treatments to limit additional congestion at Oak/Webster intersection and potential backups into Page Street

Additional DL traffic expected on Haight St turning onto Octavia; will evaluate transit travel time impacts and red line/turn violations early in pilot before assessing need for potential new or removed measures.

Increased traffic on Hermann Street is anticipated (potential need for proactive traffic calming)

Note: Southbound left-turn lane on Guerrero St recently expanded with Upper Market Safety Project

2. Haight Street

Approved/Pending Changes:
New traffic signals at Webster and Buchanan streets, left-turn restrictions at Buchanan (due to sightlines) are approved but construction is delayed until mid 2020.

Potential Pilot Variants/Additions:
Peak period left-turn restriction for southbound Webster Street at Haight Street to help limit increased congestion on Haight Street with Page/Webster diverter.

All-day or peak period parking restrictions on south side, Buchanan to Webster, to support efficient bus access to curbside zone (which is near-side Buchanan Street).
