The Bayview Quick-Build Safety Project on Williams Avenue is the implementation of traffic safety improvements directly recommended by the Bayview Community-Based Transportation Plan. This project is in support of San Francisco’s Vision Zero commitment of eliminating all traffic deaths and serious injuries.

Over the past five years, there have been 20 reported traffic collisions that resulted in injury. Failure to yield at crosswalks accounted for the majority of injury collisions along the project area.

This quick-build project aims to reduce the risk of traffic-related injuries or deaths by using reversible, adjustable traffic safety treatments that can be installed relatively quickly.

WILLIAMS AVENUE

Proposed Improvements

Quick-build projects are reversible, adjustable traffic safety improvements that can be installed relatively quickly. Unlike major capital projects that may take years to plan, design, bid and construct, quick-build projects are buildable within weeks or months and are intended to be evaluated and reviewed soon after construction.

The SFMTA is proposing the quick-build improvements shown here in order to address traffic safety challenges along Williams Avenue. Let us know what you think! Contact us at BayviewQB@SFMTA.com.

We want to hear from you!

From April 22 through May 13, the SFMTA is hosting a virtual open house as one way to provide more information about the project proposals and collect feedback.

Additionally, SFMTA project team staff will be hosting in-person and online office hours to discuss project proposals with you in detail to provide opportunities for you to ask questions.

Access the virtual open house from the project website: SFMTA.com/BayviewQB
