Market Conditions: Short-Term and Long-Term Borrowing Costs Remain Elevated

- Short-term and long-term interest rates remain elevated when compared to the past decade, largely due to the Federal Reserve’s efforts to combat high inflation.
- However, as inflation continues to subside, borrowing rates are expected to trend downward toward historical averages, though timing is uncertain.

Market Conditions: Cost of Construction Historically Expensive, Particularly in San Francisco

- A confluence of factors, including post-COVID construction demand, inflation, supply chain disruptions (including the war in Ukraine), and labor shortages—have resulted in exceptional construction cost escalation in California and throughout the US
  - While the cost of materials (such as lumber, steel, and concrete) have come down significantly in the past year and supply changes have normalized, labor costs remain elevated due to labor shortages
  - Construction escalation is anticipated to further normalize as inflation abates
- The City of San Francisco is the second most expensive city for construction in the US, behind only New York City¹
