SFMTA 20-YEAR CAPITAL PLAN 2017
EXECUTIVE SUMMARY

The San Francisco Municipal Transportation Agency’s (SFMTA) 20-year Capital Plan is a need-based assessment of the SFMTA’s anticipated capital needs for the upcoming 20 years. It is a financially unconstrained plan and includes capital needs for which funding has not yet been committed. The purpose of the Capital Plan is to identify all of the Agency’s potential capital investment needs to achieve the Agency’s and the City’s transportation goals. It also provides the foundation for developing the fiscally constrained 5-year Capital Improvement Program (CIP) and the 2-year Capital Budget. Moreover, it informs citywide and regional capital funding priorities for the City and County of San Francisco and the Bay Area.

This document represents the Agency’s fourth comprehensive effort to present a fiscally unconstrained compilation of its capital needs. This version of the Capital Plan focuses on more fully refining the scopes of the Agency’s capital needs as well as characterizing them to better showcase the role of each capital need in bringing the SFMTA closer to the realization of its strategic goals. The Capital Plan makes Agency processes more transparent by publishing the scope of what may be considered for capital funding. This also aids the prioritization process that occurs in the development of the CIP, which details what capital projects the SFMTA intends to fund over the next five years.

This document further details the role of the Capital Plan in the SFMTA and how the capital needs presented in this document reflect the long range capital investment necessary to fully support this part of the Agency’s strategic goals.

CAPITAL PROGRAM OVERVIEW

The Capital Plan is divided into 10 Capital Program Areas to help ensure that capital needs are in line with the Agency’s strategic goals and priorities. The table below shows program descriptions and total Capital Needs for each Capital Program Area:

<table>
<thead>
<tr>
<th>PROGRAM</th>

</table>
ABOUT THE SFMTA

Who We Are

The San Francisco Municipal Transportation Agency (SFMTA), a department of the City and County of San Francisco, is responsible for the management of all ground transportation in the city. The SFMTA was established in 1999 with the passage of Proposition E, which amended the city charter to merge the San Francisco Municipal Railway (Muni) with the Department of Parking and Traffic (DPT), creating an integrated transportation agency to manage city streets more effectively and advance the city’s Transit First policy. The SFMTA continued to evolve after merging with the Taxi Commission in March 2009. The Agency is governed by a Board of Directors, which is appointed by the Mayor and confirmed by the San Francisco Board of Supervisors. The SFMTA governing board provides policy oversight for the Agency, including approval of its budget, contracts, and changes of fares, fees and fines to ensure that the public interest is represented.

What We Do

Today, the San Francisco Municipal Railway (Muni) is the nation’s seventh largest public transit system. We connect people and places using a diverse vehicle fleet across multiple modes, including motor coach, trolley coach, light rail, historic streetcar and cable car. The SFMTA also manages a paratransit service for those unable to use fixed-route transit options, regulates the taxi industry, and oversees on- and off-street public parking spaces.

The SFMTA has a robust planning, design and construction function that supports all elements of the city’s transportation infrastructure. We provide long-range forecasts for the Agency’s fleets and facilities, the city’s public rights-of-way, and the transportation impacts of proposed land use developments with private developers and other partners. The SFMTA also partners with other city and regional agencies to define long-range transportation, housing and equity goals. By performing these multiple essential functions, the SFMTA directly touches every person who lives, works in or visits San Francisco, and positively impacts regional efforts to achieve California’s climate and sustainability goals, quality of life and economic vitality.

</table>
The Capital Plan is an assessment of the SFMTA's anticipated capital needs for the upcoming twenty years. It is a financially unconstrained plan and includes capital needs for which funding has not yet been committed. The purpose of the Capital Plan is to identify all of the Agency's capital investment needs. These investment needs are based on the analysis provided by a number of strategies and programs, as well as staff identified needs such as those to address potential safety issues or to comply with new mandates. Although inclusion in the Capital Plan does not guarantee funding or approval of any particular project or program contained within it, having clear and consistently stated Capital Needs are critical to the SFMTA's ability to plan for and secure federal, state, regional, and local funding.

The SFMTA Strategic Plan and Five-Year Capital Improvement Program can be found online at: www.SFMTA.com/reports.

The 20-Year Capital Plan:

1. Provides foundational structure compiling what the Agency sees as necessary over the next 20 years
2. Informs and assists the development of the 5-year Capital Improvement Program (CIP)
3. Is an advocacy tool informing local and regional efforts.

This is the fourth edition of the Capital Plan, which was previously published in 2011, 2013, and 2015. The Capital Plan is updated and published every other year. Each Capital Plan informs the 5-year Capital Improvement Program (CIP) which, unlike the Capital Plan, is fiscally constrained and programs projected revenues to capital projects. The CIP is also published every other year—about six to nine months after the publication of the Capital Plan—and requires that a capital project be listed in the Capital Plan to be funded. The fifth edition of the Capital Plan is scheduled for release in 2019.

Each of the Capital Needs in the Capital Plan represents one or multiple capital investments needed for the Agency to reach its strategic goals and objectives and to provide an optimal level of service for the City of San Francisco. Assembling these Capital Needs into one document provides a central singular starting point for projects to get funded by showing what may be eligible for funding in the capital planning process. Capital Needs represent capital infrastructure investments involving the replacement, renewal, improvement, expansion, or acquisition of capital assets. The Capital Plan and the Capital Needs do not include costs to maintain or operate
OVERVIEW OF THE CAPITAL PLAN

The Capital Plan covers the Agency’s Capital Needs over the next 20 years based on what we currently know and can reasonably predict. Over the next 20 years many of the Agency’s assets will need to be rehabilitated or replaced to maintain safe and efficient operations, service will need to be expanded to serve travel patterns of new residents and workers, and the current system will need to be enhanced to continue to provide attractive transportation choices.

In our fiscally constrained environment, the SFMTA proactively and diligently pursues diverse funding opportunities in order to realize more projects, to deliver more optimal service. The Capital Plan serves as the first step in making investment decisions across competing Agency priorities.

The SFMTA Capital Plan is used to inform transportation funding priorities for the City and County of San Francisco, including the San Francisco Capital Plan, San Francisco Transportation Plan, and Plan Bay Area.

The City and County of San Francisco’s Capital Plan (FY 2018-27)

The City and County of San Francisco develops a ten-year Capital Plan on a biennial basis for all recommended investments to replace, repair, and improve the city’s capital infrastructure and to restore healthy levels of investment in the City and County’s aging infrastructure. These capital investments represent a practical and fiscally-constrained set of improvement projects that address critical capital needs in all major City departments. As a City department, SFMTA’s needs are included in this citywide Capital Plan.

Relationship to other Local and Regional Plans

San Francisco Transportation Plan 2040 (SFTP)

The San Francisco Transportation Plan, prepared by the San Francisco County Transportation Authority and adopted by the Transportation Authority Board in December 2013, is the blueprint for San Francisco’s transportation system development and investment over the next 30 years. The SFTP brings all transportation modes, operators, and networks together, with a view to improving travel choices for all users. Through detailed analysis, interagency collaboration, and public input, the SFCTA evaluated ways to improve the transportation system with existing and potential new revenues. The SFTP recommends a diverse investment and expansion plan, as well as policy changes, which help generate revenues that fund a significant amount of SFMTAs capital needs. It also contains a SF Investment Vision that departs from business as usual and envisions how San Francisco could achieve more with potential bond measures and new sources of local revenue. SFTP will be updated as part of the Connect SF program.

infrastructure and do not involve non-capital programs. It also does not represent assets that are not owned and maintained by the SFMTA and not funded by the Agency’s Capital Budget.

For this Capital Plan, Capital Program Managers, Project Managers, and staff throughout the Agency were provided the opportunity to review the existing Capital Needs from the previous Capital Plan. The primary focus of this update was to remove those Capital Needs that have been funded, completed or are no longer planned, refine previously identified needs, and add new Capital Needs based on Agency plans including formal plans such as the:

- Muni Forward Implementation Workbook
- SFMTA Facilities Framework
- SFMTA Fleet Plan
- Rail Capacity Strategy
- State of Good Repair Report
- Vision Zero Action Strategy
- Bicycle Strategy
The SFMTA

OVERVIEW OF THE CAPITAL PLAN

Plan Bay Area 2040

Adopted in 2013 by the Metropolitan Transportation Commission and the Association of Bay Area Governments, Plan Bay Area is the long-range integrated transportation and land-use/housing strategy through 2040 for the San Francisco Bay Area. A state-mandated document (to meet the requirement of SB 375 for Metropolitan Planning Organizations, including MTC, to prepare a Sustainable Communities Strategy), it integrates long-range transportation, land-use and housing plans that will support a growing economy, provide more housing and transportation choices and reduce transportation-related pollution in the nine-county San Francisco Bay Area. This roadmap is updated every four years to reflect changing conditions and new planning priorities and helps Bay Area cities and counties plan for transportation needs and adapt to the challenges of future population growth.

As the Congestion Management Agency (CMA) for San Francisco, the SFCTA assists SFMTA and other local agencies in submitting investment needs to MTC during the Plan Bay Area Call for Projects. Inclusion in the financially-constrained project list in Plan Bay Area is mandatory for all projects seeking state or federal funds or a federal action. Three project parameters are used to evaluate projects: project readiness, plan status, and supporting adopted goals. The Capital Plan and CIP are one way that SFMTA satisfies these parameters. The SFCTA then develops recommendations for project and program priorities within MTC’s target budget for the county in consultation with stakeholders. Once approved by the SFCTA Board, the list of recommended investment priorities is submitted to MTC for evaluation in Plan Bay Area. After MTC completes its detailed project evaluation, including environmental review, the final list is adopted by the MTC Commission.

ConnectSF and the Subway Vision

ConnectSF is a multi-agency collaboration process to build an effective, equitable and sustainable transportation system for our future. It is currently developing a long-range Vision to guide transportation planning in the city for the next 50 years. While different city agencies are responsible for the completion of different Planning documents, Connect SF will ensure that these plans work towards a consistent and coherent Vision for the City’s transportation future. Over the next three years, Connect SF will coordinate transportation plans and projects for the San Francisco County Transportation Authority, San Francisco Municipal Transportation Agency, and the San Francisco Planning Department. This process is expected to inform the next, 2019 Capital Plan.

One recent effort related to Connect SF was the Subway Vision. Staff performed outreach and technical analysis to understand potential opportunities for subway construction within San Francisco. The Subway Vision does not yet include recommendations pertinent to the 2017 Capital Plan, but will be updated every four years.
OVERVIEW OF THE CAPITAL PLAN
THE CAPITAL PLANNING PROCESS

All projects seeking capital funding must be included in the Capital Plan to be eligible for inclusion in the fiscally-constrained 5-Year Capital Improvement Program (CIP). Whereas the Capital Plan includes all of the potential capital needs the SFMTA could invest in, the 5-year CIP and 2-year Capital Budget are constrained by projected and awarded revenue; only projects and phases that are substantially funded can move forward for further review and approval. The figure on the next page provides an overview of the Capital Plan’s role in the Capital Planning Process.

SFMTA Five-Year Capital Improvement Program (CIP)

The CIP is a fiscally-constrained 5-year investment plan for delivery of transportation capital projects. For a project to be considered for funding in the CIP, it must first be included in the Capital Plan. Secondly, a project must have at least 90% of its funding identified for the project or phase to be included in the CIP. Development of the CIP requires Agency staff to prioritize capital investment opportunities using other strategic planning documents, to evaluate the practical logistics of delivering projects using existing staff and agency resources, and is bounded by 5-year projections of capital revenue sources. Cumulatively, these provide the public with an understanding of which projects are planned in the next five years, along with corresponding budgets and timelines. Once included in the CIP, the capital needs become capital projects and will not be included in the next cycle of the Capital Plan. While the CIP does not guarantee funding, it conveys conservative funding projections and secured revenue to support the SFMTAs highest priority and most ready capital improvements. Both the Capital Plan and 5-year CIP are dynamic documents that may be changed or adjusted as needs arise or conditions change.

This 2017 SFMTA 20-year Capital Plan is being released ahead of the FY2019-23 CIP which is scheduled to be released in the spring of 2018. In order to align with the FY 2019-23 CIP, the cost estimates for the Capital Needs listed in this Capital Plan are for unfunded needs from Fiscal Year 2019-2038 (July 1st 2018 – June 30th 2037). Projects fully funded in the last FY2017-21 CIP are not included in cost estimates for Capital Needs in this Capital Plan.

SFMTA Two-Year Capital Budget

The 2-year Capital Budget represents a list of capital projects that is adopted or appropriated by the SFMTA Board. Capital projects must have full funding plans to be included in the Capital Budget. Many of the same conditions for inclusion in the 5-year CIP apply to the 2-year Capital Budget, with the 2-year Capital Budget largely based on the first two years of the 5-year CIP. The 2-year Capital Budget must be approved by the SFMTA Board by April of each even year.

Transportation Capital Committee (TCC)

The Transportation Capital Committee is responsible for approving, amending and implementing the 20-year Capital Plan, 5-Year CIP, and 2-year Capital Budget. This responsibility includes approving new Capital Needs for inclusion in the Capital Plan. It functions to build transparency to SFMTAs funding decisions, including those which amend the CIP as priorities shift and constraints are realized. The committee meets monthly to consider changes to the Capital Plan and CIP and is comprised of representatives of each of the SFMTAs 10 Capital Program areas. All new capital projects, budget increases, or changes to existing project scopes and schedules must be approved by this diverse committee. An Agency-wide Project Integration Process is also in place to assist inner-agency collaboration between Capital Programs in project planning.
THE CAPITAL PLANNING PROCESS

SFMTA’s Capital Programs

The Capital Plan details the Agency’s Capital Needs for consideration into the CIP, also ensures that one and only one Capital Program is responsible for each of the Agency’s Capital Needs.

The SFMTA’s Capital Programs are:
- Communications and Information Technology
- Facility
- Fleet
- Parking
- Security
- Streets
- Taxi
- Traffic Signals
- Transit Fixed Guideway
- Transit Optimization and Expansion

Since publishing the 2015 Capital Plan, the Pedestrian, Bicycle, Traffic Calming, and Schools Capital Programs have been consolidated into the Streets Capital Program. Likewise, the Accessibility Capital Program is no longer called out separately from the many projects with accessibility components distributed across existing Capital Programs. It should be noted that there is an eleventh Capital Program in the 5-year CIP: Central Subway. As its single Capital Project is fully funded and under construction, it lies outside of the scope of the Capital Plan which details unfunded Capital Needs.

Projects typically occur in four phases as shown on the following graphic:

PROJECT DELIVERY PHASES

PRE-DEVELOPMENT/PLANNING
Pre-development & preliminary planning includes the identification of the project team, the development of an objective-level project scope and outreach plan, and an assessment of the level of environmental analysis required.

Deliverable: Pre-Development Report

PRELIMINARY ENGINEERING
During the Preliminary Engineering Phase, SFMTA develops initial drawings and tests the feasibility of the proposed project. In this phase, the scope of the project is finalized. When applicable, this phase also includes California Environmental Quality Act (CEQA) and/or the National Environmental Policy Act (NEPA) Review.

Deliverable: Preliminary Development Report and, if applicable, Environmental Impact Report (EIR) or Environmental Impact Statement (EIS)

DETAILED DESIGN
During the Detail Design Phase, SFMTA implements conceptual engineering plans and produces final design specifications. The phase also includes preparation of engineer’s estimates, contract packages, and an analysis of construction bids.

Deliverable: Finished Construction Drawings, Contract Special Provisions, Anticipated Construction Schedule, Final Engineer’s Estimate

CONSTRUCTION/PROCUREMENT/IMPLEMENTATION
The Construction Phase begins with a contract award and receipt of a Notice to Proceed. SFMTA then ensures that work is constructed in accordance with drawing specifications and thorough inspections. This phase may also denote the procurement of Muni fleet vehicles and implementation of various programs and technologies.

Deliverable: Completed Capital Improvement
UPDATES FROM THE 2015 CAPITAL PLAN

The total Capital Needs identified in this Capital Plan are $21.9 billion. This is only a minor increase from the $21.2 billion in Capital Needs presented in the 2015 Capital Plan. Some of the main updates from the 2015 Capital Plan are:

- The addition of Capital Needs Characteristics to each Capital Need.
- A refinement of State of Good Repair needs which resulted in a decrease.
- The increase in scope of the Muni Subway Expansion Project which increased the capital needs.
- The incorporation of the SFMTA Facilities Framework.

For further detail about changes in Capital Needs between the 2015 and 2017 Capital Plans, please see Appendix B.

The SFMTA

This version of the Capital Plan includes Capital Needs Characteristics for each of the identified capital needs. Capital Need Characteristics help to describe the qualities of each of the capital need and illustrates the impact of each capital need relative to other needs within a Capital Program.

The qualitative nature of the Capital Needs Characteristics provides a greater value to Agency decision making as Capital Needs than the more quantitative prioritization process that the Agency conducted in previous Capital Plans. A more detailed quantitative prioritization process is more beneficial as Capital Needs become more defined Capital Projects and are considered for inclusion in the Capital Improvement Program.

State of Good Repair needs represent the resources required to keep existing capital assets operating in a manner that maintains safety, performance, and condition. The SFMTA operates within a constrained fiscal environment which requires the agency to make decisions between investing in new capital assets and investing in existing capital assets.

The SFMTA utilizes a modeling tool called TERM Lite, developed by the FTA, to support investment decisions by simulating the lifecycle needs of the agency’s capital assets. The TERM Lite modeling tool uses the SFMTA Capital Asset Inventory as a primary input and incorporates asset replacement cost, useful life, annual capital expenditure rate, and rehab/replacement policies to determine future needs.

In this 2017 capital planning process, the Agency refined the Capital Asset Inventory and the TERM Lite model to improve the accuracy of the model forecasts. These refinements resulted in a reduction in State of Good Repair capital needs, specifically, it played a significant role in the $195 million reduction in the total capital needs scope of the Traffic Signals capital program, the $334 million reduction in the total capital needs scope of the Parking capital program, and the $1,301 million reduction in the total capital needs scope of the Transit Fixed Guideway capital program.

The Muni Subway Expansion Project reflects a more expansive scope of the Muni Subway Expansion Project based on additional planning and project development work that was conducted since the last Capital Plan. This additional planning work led to development of a new project alternative with a larger scope that would construct a new light-rail tunnel between West Portal and Park Merced and re-design portions of 19th Avenue. This alternative includes a substantial increase in the length of the tunnel and additional underground stations and therefore notably increases the capital cost. The increase in the scope of this capital need to $2.5-3 billion in 2017 dollars was part of the $850 million increase in the total capital needs scope of the Transit Optimization and Expansion capital program.

The SFMTA Facilities Framework is a flexible and dynamic tool to address SFMTA’s facility needs through 2040. To provide reliable transit service, the SFMTA needs reliable facilities for its operations and fleets. The inclusion of these capital needs is a significant part of the $721 million increase in the total scope of the Facilities capital program.

Non Capital/ Non Infrastructure Programs

The Capital Plan covers Capital Needs to restore, enhance, or expand SFMTA infrastructure that our Agency needs to implement over the next 20 years in order to deliver on the City’s Transit First Policy and to assist in meeting the Agency’s strategic goals. There are many non-infrastructure programs that the SFMTA will fund to assist these infrastructure projects. For example, Transportation Demand Management projects educate the public on use and availability of transit and bicycle infrastructure in order to achieve the transportation mode shift outlined in the Agency’s strategic plan away from single occupancy vehicles. These non-infrastructure programs are funded in operations aspects of our budget or listed in and funded within the ‘Other’ category of the Capital Improvement Program. These non-infrastructure programs however are not covered in the Capital Needs listed in this Capital Plan, not because they are not important, but because they are not capital projects, and are therefore outside of the scope of this document.
The SFMTA Strategic Plan establishes the goals, objectives, and metrics by which the Agency will be measured. The 2019 Strategic Plan is currently under development. This Capital Plan is informed by the Fiscal Year 2013-2018 Strategic Plan which identified the following Strategic Goals:

1. Create a safer transportation experience for everyone.
2. Make transit, walking, bicycling, taxi, ridesharing and carsharing the preferred means of travel.
3. Improve the environment and quality of life in San Francisco.
4. Create a workplace that delivers outstanding service.

Unlike the previous three editions of the Capital Plan, this Capital Plan presents characteristics for each of the Capital Needs thereby showing how each of them assists the Agency in reaching these Strategic Goals. We are adding these characteristics to the Capital Plan and are no longer providing a quantitative capital needs prioritization score.

**Capital Project Impact**

Almost every one of the Agency’s Capital Needs either restore, enhance or expand the assets that the Agency owns and uses for service delivery. Some Capital Needs do not effect assets that the Agency owns and operates. These are denoted by an N/A (not applicable).

**Restore:**
Includes investments to replace existing assets that are beyond their useful life or normal replacement cycle (such as the Motor Coach Replacement Program). It also features investments that rehabilitate or renovate existing assets to continue the use of the asset, such as major improvements to an asset that extend the useful life (such as the Motor Coach Midlife Overhaul Program).

**Enhance:**
Includes enhancements to the functionality or quality of SFMTA assets without adding to the total assets owned and operated by the SFMTA (such as the SFMTA Facility Safety Improvement Campaign). This would include investments that upgrade systems or enhance the features of an existing asset.

**Expand:**
Includes expansion or acquisition of additional assets that the SFMTA will own and operate as well as investments that augment and increase capacity of the existing system (such as the Light Rail Vehicle Fleet Expansion).
THE 2017 CAPITAL NEEDS

Capital Need Timeframe:
The period of time that the SFMTA currently plans on undergoing the project delivery process for this Capital Need.

This indicates that the Agency plans to undergo the project delivery process within the next five years.

This indicates that the Agency plans to undergo the project delivery process in ten to twenty years.

Aside from State of Good Repair, the characteristics below are directly linked to the SFMTA’s 2013 Strategic Plan and its four stated goals. They are therefore listed here as they relate to these four goals. These goals also determined the prioritization criteria that were used in the 2015 Capital Plan.

Goal 1: Create a safer transportation experience for everyone

Safety: This Capital Need directly contributes to the safety of the transportation system, reduces incidents and injuries, and/or directly contributes to the Agency’s Vision Zero goals.

Security: This Capital Need directly protects the transportation system from external threats including vandalism, theft, or security issues and/or directly assists system adaptation to extreme weather/seismic events.

Goal 2: Make transit, walking, bicycling, taxi and carsharing the preferred means of travel

System Improvement: This Capital Need directly contributes to system reliability, travel time savings, or the quality of the system.

System Access: This Capital Need directly enhances system accessibility for seniors and persons with disabilities.
THE 2017 CAPITAL NEEDS

Goal 3: Improve the environment and quality of life in San Francisco

Environmental Sustainability:
This Capital Need directly reduces the Agency’s impact on the environment and reduces dependence on non-renewable resources.

Financial Sustainability:
This Capital Need directly contributes to a net reduction in the Agency’s operating and/or maintenance costs, contributes to the Agency’s ability to deliver capital projects, generates additional revenue for the Agency, and/or presents a clearly cost-efficient method of service delivery.

Goal 4: Create a workplace that delivers outstanding service

Workplace Quality:
This Capital Need directly contributes to the betterment of the working environment of SFMTA employees.

Capital Need Characteristic not directly connected to a Strategic Plan goal:

State of Good Repair:
Restoration Capital Needs are State of Good Repair Needs, as are Capital Needs that will directly increase the Agency’s ability to keep its assets in a State of Good Repair.

SFMTA 2017 CAPITAL NEEDS

Communications & Information Technology
Facility
Fleet
Parking
Security
Streets
Taxi
Traffic Signals
Transit Fixed Guideway
Transit Optimization & Expansion
COMMUNICATIONS & IT INFRASTRUCTURE

Plan, design and implement Information Technology infrastructure to improve internal operations and customer experience.

This program supports the planning, design and implementation of IT infrastructure projects to improve efficiency and ease-of-use across the transportation system. The SFMTA maintains a wide array of IT assets across the city, from Wi-Fi and telephony systems at SFMTA worksites to the fiber network that provides the internal communication backbone of the Muni Metro system.

Capital Needs in the Capital Plan include: the Next Generation Customer Information System to update existing NextBus technology to better serve the public, replacement and upgrades of on board Clipper card readers, various needs to improve and streamline the Agency’s data processes, build a foundation that supports innovative transportation technology systems, and maintaining our information systems, network infrastructure, security and privacy controls, and user-focused systems such as desktop computers and devices in a State of Good Repair. These initiatives all contribute to a more efficient communication network and help customers to better integrate the transit system into their day-to-day lives.

It should be noted that many of the SFMTA’s Communications and IT investments are supported through the SFMTA operating budget, and therefore do not appear in the Capital Plan.

11 CAPITAL NEEDS, $237M SCOPE

- Next Generation Transit Customer Information System
- IT and Network System Upgrades
- Data Management and Mapping Upgrades
Communication and IT Infrastructure Capital Needs

State of Good Repair of Management Info Systems (MIS), Information Technology (IT), and Network Systems | CN-CI01

Capital Need Description
State of good repair of MIS/IT/Network Systems. Provides for the replacement of various existing Communications/Information Technology assets, including SCADA, Bus On-Board Video, and the Incident Management/Tracking system.

On Board Clipper Reader Replacement and Upgrades | CN-CI02

Capital Need Description
Replacement of the existing Clipper readers (approx. 3500 units). Currently the readers are not able to integrate with Radio and only support Clipper. Replacing the existing readers with units that integrate with Radio, support NFC (open payment), QR/Barcodes and are field proven will address future compatibility issues and current equipment performance issues.

Disaster Recover / Continuity Plan | CN-CI03

Capital Need Description
The SFMTA currently does not have a disaster recovery site and in the event of a disaster that renders both of its primary data centers inoperable it would not be able to operate any of its IT systems in any capacity. A Disaster Recovery site is required to enable the operation of key systems in the event of a disaster.

Next Generation Customer Information System | CN-CI06

Capital Need Description
Through its use of real-time information, this project is designed to increase public confidence in Muni so that customers can take transit to their destinations quickly and reliably anywhere in San Francisco. The system will employ the latest technology to make transit easier and more convenient to ride in an environment of increasing transportation choices and congestion. The project will take advantage of maturing and advanced technologies including: sophisticated real-time transit arrival prediction algorithms, algorithms that generate alternatives based on location and nearby vehicles, mobile technologies and associated user information to understand system usage and customer preferences, real-time passenger counting to assess vehicle loads, real-time signage on board vehicle, and solar-powered information signs.

Communication and IT Infrastructure Capital Needs

SFMTA System Support and Security | CN-CI09

**Capital Need Description**
Includes Video Infrastructure Systems to provide a standardized and rationalized video system and network infrastructure with role-based access and security, a full illustrated electronic catalog mapping all parts for all contracted equipment suppliers to digitized engineering diagrams and schematics, and the building and maintenance of a risk-appropriate security framework and technologies to support business continuity and information privacy.

**Capital Need Justification**
Current systems are fragmented and do not offer the necessary features for long-term system safety, security and operations. It is useful for mechanics and others to have a full listing of available parts. A searchable electronic part catalog will allow staff to be fully certain they are looking up correct parts for a given task. This catalog will also be useful for analysts who have to conduct analyses and are familiar with equipment in general, but who do not order parts on regularly. Business continuity and information privacy are vulnerable without a long-term security roadmap.

**Sub systems for ATCS** | CN-CI10

**Capital Need Description**
Add diversified and redundancy to the Advanced Train Control Systems (ATCS) sub-systems. ATCS manages train traffic and movement when trains switch from manual to automatic control as they exit the surface streets and enter the underground tunnels. The system is built on several sub-systems that ensure safe movement of trains. However, the sub systems are dependent on a single vendor, Thales Transport & Security, and diversification would add resiliency and additional redundancy beyond the current configuration.

**Capital Need Justification**
Current system is dependent on a single vendor and diversification would add resiliency.

**High Volume Cloud-Based Data Integration, Analytics, Reporting and Monitoring Platform** | CN-CI11

**Capital Need Description**
Create a high volume cloud based data platform for storing a wide range of high volume data, applying analytics to this data for use in recommendation engines and reports, managing and monitoring this incoming data in real-time, and migrating this to government cloud services when appropriate.

**Capital Need Justification**
The SFMTA is managing and receiving large volumes of data. A platform capable of storing, analyzing, reporting, monitoring and delivering data in a speedy manner with minimal maintenance and effort would assist the Agency in detecting and fixing issues in expeditiously to deliver quality service.

**Phase 2 Radio Project – Platform Consolidation** | CN-CI12

**Capital Need Description**
The first phase of the computer-aided dispatch/automatic vehicle location (CAD/AVL) system, commonly known as the radio system, will be complete summer of 2017. A second phase is needed to consolidate additional vehicle networks. This would utilize the new CAD/AVL system as a unifying technology platform to provide a single network and technology interface on all vehicles. This is important to ensure future technologies onboard vehicles are compatible with one-another; reduce overall network communications costs and deploy future technologies that would utilize communications and networking through the CAD/AVL.

**Capital Need Justification**
There are currently 11 networks and antennas on vehicles, which limits compatibility and expansion of systems. This will enable to consolidation of systems resulting in cost savings and expansion of future systems will be more cost effective with a single network on vehicles.

**Computer Aided Design Upgrades** | CN-CI13

**Capital Need Description**
Centralize Computer Aided Design (CAD) work into a central repository, digitalize all technical schematics, and automate the transfer of CAD work into a centralized Geographic Information System (GIS) datastore.

**Capital Need Justification**
This will speed up creation of new designs, make existing technical schematics more usable for SFMTA staff, and close the gap between CAD and GIS users.
Acquire, rehabilitate, and/or construct maintenance facilities and transit stations used for transit, traffic, and parking operations.

Efficient and well-functioning maintenance, fueling, storage, and staging facilities are vital to ensuring reliable transit service and that SFMTA’s fleet is in a state of good repair. Several of SFMTA’s maintenance facilities are past their useful lives, with some dating more than 100 years into SFMTA’s history. The Facilities Program supports the modernization and expansion of obsolete facilities to make them safe and efficient, as well as acquiring new facilities to accommodate fleet expansion. Where possible, the Agency plans to reconfigure, consolidate, or expand existing facilities to meet operational needs, allocate costs efficiently, and incorporate the infrastructure and the space needed for the growing and changing fleet. These Capital Needs will also ensure that all SFMTA employees experience a safe, comfortable and optimal working environment.

The Capital Needs expressed in this program will accommodate the existing and expanded SFMTA Fleet as projected to 2040. Certain Capital Needs represent projects that must be readily implemented to create adequate capacity to store and maintain fleet vehicles. SFMTA does not have capacity at existing yards to accommodate the projected fleet expansion in the 2017 Fleet Plan.

More information on our Facility initiatives can be found in SFMTA’s draft Facility Framework, available for viewing at the SFMTA administrative headquarters at 1 S. Van Ness Avenue.

26 CAPITAL NEEDS, $3,490M SCOPE

- More efficient, higher-capacity maintenance facilities
- Modernized facilities for a modern fleet
- Better working environment for SFMTA employees
## Facility Capital Needs

### 1201 Mason Street (Cable Car Barn) Enhancement | CN-FC03

**Capital Need Description**
Constructs office space and refurbishes and replans existing offices to aid in growing Cable Car staffing needs. This scope may change if other needs at 1201 Mason Street become a higher priority as informed by ongoing inspection and analysis.

**Capital Need Justification**
Improvements will enhance maintenance efficiency and safety for the cable car system. It will indirectly result in safer, more reliable service and increases in cable car use. Improvements will also help maintain a healthy working environment for employees.

### SFMTA Facility Safety Improvement Campaign | CN-FC06

**Capital Need Description**
Features a series of facility safety improvement projects at all SFMTA facilities, as appropriate. Projects include: Eye Wash Stations, Pigeon Abatement, Pit Drain Sump Systems, Pit Safety Nets, Motive Power Emergency Lights, Potrero Storeroom Isolation Wall, and Presidio Power Shutoff Switches.

**Capital Need Justification**
These projects improve the safety of the work environment. Investments in safety infrastructure also assist in promoting a culture of safety.

<table>

### SFMTA Facility Fire Life Safety System Campaign | CN-FC08

**Capital Need Description**
Implement Fire Safety Improvements at 6 SFMTA Facilities, including new and additional fire protection (sprinklers, alarms, strobes, etc.) to bring buildings into compliance with fire safety regulations.

**Capital Need Justification**
Remain in compliance with safety regulations.

<table>
<thead>
<tr>

### 1201 Mason (Cable Car Barn) Rehabilitation | CN-FC11

**Capital Need Description**
Rehabilitate and replace major systems of the Cable Car Barn facility. Major functions of the facility including storage and running repair of vehicles, as well as the cable and winding machines that move the cable cars.

**Capital Need Justification**
Maintaining existing cable car facility and fixed equipment in a state of good repair will help ensure safe and reliable transit service.

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>$182.2 M</td>
<td>5.2%</td>
</tr>
</tbody>
</table>

### SFMTA Facilities Renewal Campaign - ONGOING | CN-FC12

**Capital Need Description**
Rehabilitate and replace facility infrastructure and fixed equipment, primarily the building structure and internal systems (e.g., HVAC, piping, electrical). Some projects identified in the Real Estate Vision are listed separately.

**Capital Need Justification**
Timely replacement and rehabilitation of SFMTA facilities improves the agency’s ability to provide reliable service. This project is critical to maintaining facilities in a state-of-good-repair.

<table>
<thead>
<tr>
<th>Capital Need Estimated Cost</th>
<th>% of Total Capital Program</th>
</tr>
</thead>
<tbody>
<tr>
<td>$140.1 M</td>
<td>4%</td>
</tr>
</tbody>
</table>

### Operator Convenience Stations Renewal Campaign | CN-FC13

**Capital Need Description**
Includes major rehabilitation, preservation, and improvement of 25 existing restroom facilities at 6 locations, including Operations Central Control (OCC), subway stations, etc. and construction of new operator restrooms.

Most were built between the 1980s and early 2000s. Some are nearing the end of their estimated 33 year lifespan. A few are historic - with very old outside facades and newer interiors (Taraval and Judah are two examples)

**Capital Need Justification**
This project will improve and enhance employee facilities, leading to healthier working environments.

<table>

SFMTA Capital Plan | 43

SFMTA Real Estate Capital (Joint-Use Development)

Capital Need Description
The SFMTA has numerous sites in San Francisco that would be appropriate for joint-use development for housing or retail purposes; however up front capital is sometimes needed for site preparation or for a capital contribution for concurrent SFMTA operations on-site.

Capital Need Justification
Fully utilizing existing SFMTA properties provides resources to operate and maintain the Muni fleet.

<table>

</table>

| Capital Need Characteristics | CN-FC21 |

2301 Stockton (Kirkland) Facility Reconstruction

Capital Need Description
Complete rebuild of the Kirkland Division, including addition of full maintenance capacity at the division, per Option 2 of the Facilities Framework.

Capital Need Justification
The division facility is over 60 years old and is obsolete and needs to be replaced. It is too small, and is located among non-conforming interests. The resulting improvements will provide safer and healthier working conditions and will ensure that the transportation system is more efficient. Efficient and properly designed facilities are key to maintaining the Muni Fleet in a state of good repair.

<table>
<thead>
<tr>

| Capital Need Characteristics | CN-FC22 |

2500 Mariposa (Potrero) Facility Reconstruction

Capital Need Description
Complete rebuild Presidio Division - fleet moves to pivot facility to remain in service while rebuild is underway. Cost estimate reflects Option 2 of the Facilities Framework, which consists of construction of a more intense development with a multi-level facility.

Capital Need Justification
The division facility is over 100 years old and is obsolete and needs to be replaced. The resulting improvements will provide safer and healthier working conditions and will ensure that the transportation system is more efficient. Efficient and properly designed facilities are key to maintaining the Muni Fleet in a state of good repair.

<table>

</tr>
</thead>
</table>

| Capital Need Characteristics | CN-FC23 |

601 25th Street (Muni Metro East) Expansion Project

Phase I and Phase II

Capital Need Description
Expand the Muni Metro Rail Facility into the currently undeveloped 4 acres to the east of the existing yard, for future light rail vehicle storage, a combined back shop for all modes, and interim bus maintenance and storage use prior to delivery of the expanded light rail vehicle fleet.

Capital Need Justification
Expand

| Capital Need Characteristics | CN-FC15 |

Real Property Acquisition for SFMTA Facilities

Capital Need Description
Acquisition of real estate property (purchase or long-term lease) for needed Facilities expansion / relocation. This would include using funds to acquire real estate on existing leases where SFMTA holds a “right of first refusal” if the property is to be sold, or a “purchase option” as part of a lease, or other similar contract language.

Capital Need Justification
Facilities for transit operations, paratransit, SSD shops, etc. are located on short-term leased property and it is in the strategic interest of SFMTA to secure long-term or permanent locations for these activities. The continued growth of transit results in a similar challenge as SFMTA has a need for long-term or permanent locations for transit operations facilities.

<table>
<thead>

<th>3.4%</th>
</tr>
</thead>
</table>

Transportation Operation Fixed Equipment Replacement Campaign

Capital Need Description
Provides for ongoing acquisition and replacement of the equipment needed to support all aspects of SFMTA operations, maintenance and administrative functions.

Capital Need Justification
Timely replacement and enhancement of the shop equipment increases SFMTA’s ability to provide reliable service and reduce incidents stemming from faulty equipment. This project is critical to maintaining a state-of-good-repair of the equipment that support operations, maintenance, and administration functions.

<table>
<thead>
<tr>

Real Property Acquisition for SFMTA Facilities

Capital Need Description
Acquisition of real estate property (purchase or long-term lease) for needed Facilities expansion / relocation. This would include using funds to acquire real estate on existing leases where SFMTA holds a “right of first refusal” if the property is to be sold, or a “purchase option” as part of a lease, or other similar contract language.

Capital Need Justification
Facilities for transit operations, paratransit, SSD shops, etc. are located on short-term leased property and it is in the strategic interest of SFMTA to secure long-term or permanent locations for these activities. The continued growth of transit results in a similar challenge as SFMTA has a need for long-term or permanent locations for transit operations facilities.
**Facility Capital Needs**

### 949 Presidio (Presidio) Facility Reconstruction

**Capital Need Description**
Completely rebuild Presidio Division - fleet moves to pivot facility to remain in service while rebuild is underway. Cost estimate reflects Option 2 of the Facilities Framework, which consists of construction of a more intense development with a multi-level facility.

**Capital Need Justification**
The division facility is over 100 years old and is obsolete and needs to be replaced. The resulting improvements will provide safer and healthier working conditions and will ensure that the transportation system is more efficient. Efficient and properly designed facilities are key to maintaining the Muni Fleet in a state of good repair.

### 1940 Harrison Street (Flynn Facility) Rehabilitation

**Capital Need Description**
The scope of the proposed Flynn Bus Maintenance Facility Renovation project includes: lift upgrades for all-in-ground lifts and hoists, roof improvements, exhaust fan upgrades, mechanical and HVAC replacement, air and diesel equipment replacement including air compressors, generators and fire pumps.

**Capital Need Justification**
Other than the new Islais Creek Bus Maintenance Facility, the Flynn Facility is the only location that the SFMTA can store and maintain 60 ft. motorcoaches. The fleet is currently growing, and this facility needs to be modernized to maintain the new and growing fleet.

### Rubber Tire Division Wash Rack Replacement (Sustainability - Water)

**Capital Need Description**
Provides new updated wash racks for all five Rubber Tire Transit Divisions. Wash racks will be able to handle standard and/or articulated motor coaches depending on the division in which they are installed.

**Capital Need Justification**
This project will result in cleaner buses, with the potential of improving customer satisfaction. It will also improve the working environment by providing more effective and modernized equipment that reduces water resource consumption and efficiently utilizes necessary cleaning chemicals.

### 1200 15th Street (Enforcement Headquarters)

**Capital Need Description**
Improves the CCSF Animal Care and Control Facility at 1200 15th Street as a newly owned headquarters for the Sustainable Streets Enforcement Sub-Division.

**Capital Need Justification**
Improves coordination for the Security, Investigations and Enforcement (SIE) Group, and ends the short-term lease of their current facilities. Provides adequate space for SIE group job functions.

### Subway Station Rehabilitation Campaign

**Capital Need Description**
Provides for ongoing rehabilitation and improvement projects in the Metro Subway stations. It includes rehabilitation of substructure, superstructure, Heating, Ventilating, and Air Conditioning (HVAC) systems, electrical systems, plumbing systems, as well as painting and platform edge detection tile replacement.

**Capital Need Justification**
Well-maintained subway station facilities will reduce the risk of safety hazards due to deteriorating systems. Timely replacement of assets allows for consistent and efficient station operations, i.e., replaces old systems with energy-efficient ones.

### SFMTA Facilities Solar Panel Installation (Sustainability - Power)

**Capital Need Description**
Installation of solar panels at the Woods, Potrero, Presidio and Flynn Facilities. Each facility has an abundance of open, clear roof space where solar panels could be installed. The resulting electrical generation could be used to power each facility and excess energy could be returned to the power grid.

**Capital Need Justification**
This project will improve energy efficiency and would result in cost savings. It would also support the agency’s sustainability goals by reducing SFMTA’s use of non-renewable resources.
Facility Capital Needs

1095 Indiana (Woods) Facility Rehabilitation | CN-FC30

Capital Need Description
Replace paint booth, replace wash racks with washer that can handle 60’ buses, improve maintenance areas after component rebuild is moved to Burke, modify some maintenance bays to accept 60’ buses, upgrade existing equipment throughout the facility.

Capital Need Justification
Upgrade Woods to achieve better performance in maintenance areas, and to have facilities that can accommodate 60’ buses.

SFMTA Elevator/Escalator Rehabilitation Program | CN-FC31

Capital Need Description
Forty elevators and escalators are located in the Muni Metro System. The twelve remaining elevators are located at other facilities. This program replaces several components that are most prone to failure, including door operators, landing doors, cab doors, door tracks, sills and sill angles, thus extending their useful life and improving reliability. These upgrades are especially necessary for ensuring accessibility concerns for seniors and people with disabilities.

Capital Need Justification
The Capital Need will improve the reliability of station elevators and ensure consistent and safe access to stations for persons with disabilities.

Muni Metro Station Escalator Rehabilitation Program | CN-FC32

Capital Need Description
Existing escalators in transit stations will be rehabilitated or replaced to conform with current building codes and incorporate modern safety features. Capital Need includes the six escalators that have not been completed or funded.

Capital Need Justification
The project will improve the reliability of station escalators and ensure consistent and safe access to stations for persons with disabilities.

Muni Metro Elevator Expansion | CN-FC33

Capital Need Description
Install new ADA compliant street and platform elevators at Muni Metro stations with level changes, including shared BART/Metro stations. Initially, elevators would be installed at stations that currently only provide one elevator, or where a fully ADA compliant elevator is not available. The full build out would provide at least one ADA compliant elevator at every Muni Metro access point.

Capital Need Justification
The new elevators will ensure consistent and fully ADA compliant access to the underground Metro stations for people with mobility impairments and others needing the elevator for access to the stations.

Paratransit Facility | CN-FC34

Capital Need Description
Build a paratransit facility on property owned or long-term leased by City of S.F. The current cost estimate assumes the facility would share a location with a separately operated new or renovated SFMTA transit division.

Capital Need Justification
Build a paratransit facility that would be leased to a paratransit service provider. The purpose behind building a facility of this type is to ensure paratransit service is met in SF, which may be problematic if available spaces for leasing are not present at a future time.

Develop a SFMTA New Motorcoach Facility | CN-FC35

Capital Need Description
The SFMTA requires a new multimodal transportation facility for an expanding bus fleet. Cost includes land purchase and full construction of a facility for approximately 300 busses with storage and full maintenance capability.

Capital Need Justification
A new bus operations facility would provide the flexibility to implement the Real Estate Vision in a shorter timeline, increasing SFMTA vehicle facility capacities and maintenance capabilities sooner.
SFMTA Facilities Renewal Campaign - BACKLOG

Capital Need Description
Rehabilitate and replace facility infrastructure and fixed equipment, primarily the building structure and internal systems (e.g., HVAC, piping, electrical). Some projects identified in the Real Estate Vision are listed separately.

Capital Need Justification
Timely replacement and rehabilitation of SFMTA facilities improves the agency’s ability to provide reliable service. This project is critical to maintaining facilities in a state-of-good-repair.

1 South Van Ness (SFMTA Headquarters)

Capital Need Description
Perform tenant improvements at 1 SVN replacing carpets and workstations to increase capacity and space use with existing square footage. Includes modernization conference and meeting room technology and other minor improvements to conference spaces.

Capital Need Justification
The SFMTA has increased staff at 1 SVN (SFMTA Headquarters), however the Agency is working to optimize existing square footage, rather than purchase or lease additional space in the downtown area.
FLEET

Purchase and maintain revenue and non-revenue vehicles (including motor coaches, light rail vehicles and paratransit vans) to meet transit needs.

Muni currently operates over 1,021 service vehicles across 79 transit lines. The Fleet Capital Program ensures that these vehicles are safe, comfortable, clean, and reliable for San Francisco passengers. Rehabilitating or replacing vehicles as they near the end of their useful life helps avoid costly repairs and service interruptions caused by vehicle failures. SFMTA also prioritizes adding more vehicles, which alleviates overcrowding on busy routes and enables the transit system to carry more passengers as the city grows.

These initiatives all contribute to SMFTA’s long-term goals of increasing Muni service on key routes and eliminating delays caused by outdated vehicles and infrastructure.

Some of our Fleet Capital Needs include cable car and historic vehicle renovations, replacing and expanding the light rail fleet, routine replacement of the paratransit and non-revenue vehicle fleet, and replacing and expanding Muni’s entire rubber tire fleet with modern, efficient buses.

16 Capital Needs, $4,540M Scope

- New transit vehicles for a safer and more reliable Muni experience
- Fleet expansion to provide more service capacity on overcrowded routes
- Vehicle rehabilitation projects to reduce service delays
Fleet Capital Needs

Light Rail Vehicle Fleet Expansion

Capital Need Description
Expansion of light rail vehicle fleet by up to 113 vehicles. The current contract includes 24 vehicles to allow for the opening of the Central Subway. These vehicles will be in service prior to 2019. An option has also been exercised for 40 additional vehicles to further expand service. Delivery is scheduled in 2018 and 2019. The contract also provides for the option to purchase 45 additional light rail vehicles to further increase the level of transit service. The 45-car option has not been exercised. The City will also purchase four vehicles per a development agreement related to the Warriors arena that may be in addition to those included in the contract.

Capital Need Justification
This project will provide for increased service along existing and under construction light rail lines. Expansion of the Light Rail fleet with modern vehicles should allow for greater speed, reliability and comfort.

Rail and Bus Training Simulators

Capital Need Description
Purchase and installation of one rail simulator and one bus simulator. These simulators will be used to train transit operators on basic operations and how to maintain control through difficult weather conditions, equipment malfunctions, traffic obstacles, and other real-world situations.

Capital Need Justification
Adequately trained operators are critical to maintaining system safety. Increased operator knowledge of vehicles can also assist maintenance staff when troubleshooting problems.

Cable Car Vehicle Rehabilitation (Program)

Capital Need Description
This program consists of the accelerated, phased overhaul and reconstruction of the 40 vehicles Cable Car fleet. Given the cultural significance and historical importance of the Cable Car system and Fleet, it is a priority to ensure that the Cable Cars’ condition is consistent with the City’s pride in our fleet. The expected life of a rebuilt Cable Car is approximately 20 years, with a minor rehabilitation every 5-7 years. This program includes major rehabilitation of 17 Powell Cars and 11 California Cars to like-new condition, and mid-life rehabilitation of 10 Powell Cars and 2 California Cars. This program will ensure the availability of funding for staff and materials to complete needed rehabilitation on a rolling 5-7 year basis.

Capital Need Justification
This program will maintain a high level of system reliability, safety, and productivity, providing quality service to this top tourist attraction.

Historic Vehicle Rehabilitation (Program)

Capital Need Description
The program consist of the systematic rehabilitation of 45 historic streetcar vehicles, featuring an end of life rehab (to like-new condition). A rehab is needed every 15 to 20 years. It includes rehab or replacement of the brake interlock system, backup master controller, electrical system, propulsion, and other systems as well as complete body repair, fare box and radio replacement, and ADA updates.

Capital Need Justification
This project will maintain a high level of system reliability, safety, and productivity, providing quality service to patrons. It is necessary to keep the cars in operation since they are not replaced.

Light Rail Vehicle Midlife Overhauls (Program)

Capital Need Description
Includes the systematic midlife rehabilitation and overhaul of 242 out of 264 Siemens light rail vehicles. The current delivery schedule estimates that the majority of vehicles will reach the middle of their lives by 2018. This program includes heating ventilation and air conditioning (HVAC), brakes, couplers, pantograph, propulsion, doors, car body, seats, and cab. These figures include cars from the 45-car option, but the delivery and subsequent overhaul years are estimated at this time, and it is possible that not all will be purchased. Additionally, it is anticipated that mid-life overhauls of the Breda LRV fleet will be complete by 2019 and that any additional overhauls will be of selected systems on only a portion of the fleet.

Capital Need Justification
Mid-life overhauls are required to ensure that the vehicles can operate for their full useful lives of 25 years.

Light Rail Vehicle Replacement (Program)

Capital Need Description
Includes replacement of the entire fleet of Breda light rail vehicles when they reach the end of their useful life, with 151 new light rail vehicles (LRVs) that meet the operational and capacity needs of the Metro light rail system. Replacement every 25 years.

Capital Need Justification
This project will provide for the modernization of the existing light rail vehicle (LRV) fleet and will also allow for greater speed, reliability, and comfort.
Fleet Capital Needs

Replace On-Board Fare Collection Equipment

**Capital Need Description**
Covers replacement of 1,338 fareboxes. In addition to fareboxes, this project would include replacement of revenue transfer and collection equipment and software, a data collection and reporting system, and integration with the computer aided dispatch/automatic vehicle location (CAD/AVL) system. Further fleet expansion could increase this capital need.

**Capital Need Justification**
This project will effectively improve system accountability as well as passenger boarding. In addition, it will lead to better system reliability and reductions in travel time.

**Motor Coach Expansion (Program)**

**Capital Need Description**
Expansion of the motor coach fleet, both in number of vehicles and vehicle capacity, to accommodate projected growth. Expansion after 2018 may include up to 110 additional motor coaches to a total of 674. These expansion vehicles would include those needed to provide expanded service to planned major developments (Parkmerced, Treasure Island, Hunters Point/Candlestick Point Shipyard).

**Capital Need Justification**
The expansion of the motor coach fleet is needed to meet projected ridership demand. In addition, new fleet procurements will help meet operational needs for larger capacity vehicles and help meet zero emissions targets.

**Motor Coach Midlife Overhaul (Program)**

**Capital Need Description**
The primary focus of this program is to maintain the motor coach fleet in a state of good repair by replacing key components midway through the vehicle’s useful life. Mid-life rehabilitation of the motor coach fleet ensures that the vehicles operate in a safe and secure manner, reducing safety hazards and vandalism. In addition, this rehabilitation program will allow each vehicle to reach its full useful life before needing to be replaced. Timely rehabilitation of the motor coach fleet reduces the number of breakdowns and improves service reliability.

**Paratransit Fleet Replacement (Program)**

**Capital Need Description**
Provides for the routine, scheduled replacement of 75 large cutaway vans every 5 years, and 38 paratransit minivans every 4 years. The capacity of the cutaway vans is 2 wheelchair users and 12 seated passengers. Maximum minivan capacity is 2 wheelchair users and 3 seated passengers.

**Capital Need Justification**
This project will replace the current fleet of vehicles used to deliver ADA and non-ADA paratransit service (e.g. paratransit taxi & group van service), providing for newer, modern vehicles and better access for persons with disabilities who are unable to access the fixed route transit system.

**Non-Revenue Vehicle Replacement (Program)**

**Capital Need Description**
Consists of the purchase and replacement of non-revenue vehicles, such as specialized maintenance vehicles, as well as light and heavy duty trucks and sedans that are used throughout the agency. This project will replace existing non-revenue vehicles at the end of their useful life.

**Capital Need Justification**
On-time replacement of non-revenue vehicles ensures that employees can effectively support the operations of the transportation system and efficiently access locations where there are service incidents and perform corrective measures. Many vehicles have significantly exceeded their useful lives and their current condition presents challenges for maintaining effective operations.
Fleet Capital Needs

Trolley Coach Midlife Overhaul (Program) | CN-FT14
---
Capital Need Description
Implements systematic mid-life overhauls of all 278 vehicles in the trolley coach fleet. This program includes the rehabilitation and replacement of frames, inverter replacement, battery management, and minor overhaul of major components. This program of rebuilds and overhauls involves modernization of equipment to meet current standards (e.g., accessibility).

Capital Need Justification
The primary focus of this program is to maintain the trolley coach fleet in a state of good repair by overhauling vehicle components midway through the vehicle's useful life.

Capital Need Estimated Cost | % of Total Capital Program
$167 M | 3.7%

Capital Project Impact
Restore

Capital Need Timeframe
2023 2028 2038 2018

Trolley Coach Replacement (Program) | CN-FT15
---
Capital Need Description
Provides for the systematic replacement of 278 vehicles in the trolley coach fleet. This project replaces the trolley coach vehicles at the end of their useful life, maintaining the trolley coach fleet in a state-of-good-repair. During replacement, the mix of vehicles sizes may be adjusted to align with the Transit Fleet Management Plan projections of ridership (more 60' vehicles, fewer 40' vehicles). FTA replacement guideline is every 15 years but SFMTA wishes to replace them at every 12 years since the rubber-tire hybrids are rated for 12 years per FTA guideline. Reasoning is both hybrids & trolley are operating in similar terrain.

Capital Need Justification
Timely replacement of trolley coach vehicles reduces the number of incidents and breakdowns from vehicle deterioration and age, contributing to greater reliability and a cleaner and more comfortable experience for the customer and employee.

Capital Need Estimated Cost | % of Total Capital Program
$450 M | 9.9%

Capital Project Impact
Restore

Capital Need Timeframe
2023 2028 2038 2018

Light Rail Vehicle Heavy Repair Overhaul | CN-FT16
---
Capital Need Description
Includes periodic overhauls of all 264 Siemens light rail vehicles and one quarter (38) of the Breda vehicles. Heavy repair overhauls are targeted to occur every 4-5 years. This program focuses on overhaul of mechanical components of the trucks, including brakes and propulsion, and does not cover as many systems as the mid-life overhauls. These figures include the 45-car option vehicles, though the final number that is purchased may be different.

Capital Need Justification
Heavy repair overhauls are required to ensure that the vehicles can operate for their full useful lives of 25 years. Although Breda vehicles will be phased out of service as the replacement Siemens vehicles are delivered, overhauls will still be required because phase out will not be complete until 2028.

Capital Need Estimated Cost | % of Total Capital Program
$535 M | 11.8%

Capital Project Impact
Restore

Capital Need Timeframe
2023 2028 2038 2018

Replacement of Other On-Board Equipment | CN-FT17
---
Capital Need Description
Replacement of on-board monitoring and control equipment. Includes replacement of CCTV, automatic passenger counters, radio, and on-board ATCS equipment. Replacement required every five to six years when not provided with a new vehicle.

Capital Need Justification
Replacement of on-board equipment is required to maintain safe and efficient operations. The equipment does not last as long as the vehicles on which it is placed.

Capital Need Estimated Cost | % of Total Capital Program
$100 M | 2.2%

Capital Project Impact
Restore

---
PARKING

Plan, design, engineer, and maintain public parking facilities or street infrastructure related to public parking.

The SFMTA is responsible for maintaining on- and off-street public parking facilities that serve San Francisco residents, visitors, and businesses. The Parking Program supports the planning, design, rehabilitation, construction and operation of public parking garages, as well as street infrastructure and facilities related to public parking. This includes ensuring that parking garages are structurally sound, well-ventilated, well-lit and otherwise well maintained such that they provide a welcoming customer experience. The SFMTA also ensures that parking structures are accessible and meet the requirements of the Americans with Disabilities Act (ADA). For on-street parking, the SFMTA procures and maintains vehicle detection technology and a means by which drivers can pay for parking in busy areas (primarily in the form of parking meters).

Capital Needs over the next twenty years include ensuring that current SFMTA parking infrastructure remains in a state of good repair, and that our parking garages are able to withstand seismic and extreme weather events. In addition, SFMTA must procure state-of-the-art vehicle detection and payment technologies; because the useful life of these technologies is between 5 and 10 years, we must plan for a few such procurements over the next 20 years.

5 CAPITAL NEEDS, $671M SCOPE

- Seismic upgrades to ensure safe and secure parking garages
- Parking Vehicle Detection Technology
- Modernized Parking Meter Equipment
Parking Capital Needs

Implement Parking Vehicle Detection Technology | CN-PK02

**Capital Need Description**
Implement vehicle detection technology to measure parking occupancy. This will support demand-responsive meter rate adjustments and help provide parking availability information to the public.

**Capital Need Justification**
Improving parking availability and providing information to the public will make it easier to find a parking space. This reduces vehicle miles traveled and greenhouse gas emissions.

**Capital Need Timeframe**

PARKING CAPSULE

PARKING CAPSULE

PARKING CAPSULE

PARKING CAPSULE

PARKING CAPSULE

Parking Access Revenue Control System | CN-PK05

**Capital Need Description**
Replacement of the Parking Access and Revenue Control Systems (PARCS) software, hardware, ticket dispensers, gate arms, registers, ticket acceptors, ticket readers, and pay stations at 20 SFMTA off-street parking garages.

**Capital Need Justification**
The PARCS equipment is antiquated and requires regular maintenance. Due to the different hardware and software versions, staff cannot get a coherent report from the parking garages. Parking equipment replacement parts in some of the garages are no longer available.

PARKING CAPSULE

Parking Facilities State of Good Repair (Program) | CN-PK03

**Capital Need Description**
Restoration of 38 parking facilities that provide nearly 15,000 parking spaces, 90,000 sq. ft. of retail space and generate over $85M in annual gross revenues. Includes major rehabilitation, preservation, and improvement of existing parking facilities to enhance parking infrastructure and improve parking management. Implements improvements to elevators, energy efficient lighting, and mechanical systems (e.g., HVAC, sump pumps), CCTV surveillance systems, and bike parking as well as compliance with ADA regulations and various Planning, Building and Fire Codes.

**Capital Need Justification**
When completed, this project will extend the useful life of major revenue-generating assets, enhance safety of public facilities, as well as help provide better services for those bicycling, carpooling and carsharing.

Parking Facility Structural and Seismic Upgrades | CN-PK06

**Capital Need Description**
Most of SFMTA’s parking structures are at least 20 years old (oldest garage was built in 1941). Performing a structural analysis to assess the integrity of the SFMTA garages is the first and necessary step to ensure the viability of SFMTA parking assets. The second step is to implement structural and seismic upgrades, where needed.

**Capital Need Justification**
Improving the seismic and structural integrity of existing parking structures increases the resiliency of the facilities in the event of a natural disaster.

**Capital Need Timeframe**

Parking Meters State of Good Repair (Program) | CN-PK04

**Capital Need Description**
Replaces and modernizes equipment for all 27,000 metered parking spaces. All on-street parking meters were replaced in 2014. This estimate accounts for three additional replacements within the next 20 years. Assumes expansion of number of meters during replacements.

**Capital Need Justification**
Modernizing existing parking meters will improve reliability and increase driver convenience by accepting non-cash forms of payment. Modernized meters will also allow for demand-responsive pricing.

**Capital Need Timeframe**

<table>

SECURITY

Plan, design, and implement robust systems to improve the security of the transportation system.

Developing state-of-the-art security and emergency management systems is crucial to providing San Francisco with a safe and reliable transportation system. Security Program funds are used to plan, design, and implement security initiatives in case of a natural disaster, terrorist attack, or other emergency situations. SFMTA also applies for competitive grants such as the federal Transit Security Grant Program, which provides funding for projects that protect vital transportation infrastructure, employees and passengers against potential terrorist and security threats.

The Capital Needs listed in this program represent Security and Emergency Management needs to ensure that SFMTA infrastructure remains protected against external threats such as extreme weather events, vandalism, and terrorist attacks.

9 CAPITAL NEEDS, $545M SCOPE

- Ongoing planning and implementation to protect critical infrastructure
- Subway flooding and tunnel intrusion mitigation
- Implementation of Threat and Vulnerability Assessment recommendations
Security Capital Needs

Threat and Vulnerability Assessment (TVA) Implementation | CN-SC01

**Capital Need Description**
This capital need addresses two major elements of threat and vulnerability assessment which includes review and mitigation implementation. Capital need CN-SC01 funds annual emergency management and security reviews of major threats and vulnerabilities to SFMTA’s critical infrastructure, assets, and facilities. Based on these reviews, the capital need covers the implementation of high-priority mitigation and preparedness projects to protect critical SFMTA facilities, assets, and infrastructure. Project represented by this capital need address natural, manmade, or cybersecurity threats of the SFMTA with an emphasis on Rail Transit Security.

**Capital Need Justification**
Improves safety and security for employees and customers by planning for and implementing solutions to reduce impacts of natural, manmade, or cybersecurity disasters. The annual reviews and strategies developed from these reviews ensure the Agency meets its regulatory requirements.

**Capital Need Estimated Cost**
| % of Total Capital Program | $67 M | 12.3% |

**Capital Need Timeframe**

**Capital Need Impact**
Enhance

**Capital Need Characteristics**

Technology In Transportation Emergency Management | CN-SC04

**Capital Need Description**
Implementation of technology projects from industry best practices to enhance rail system security and employee/customer protection during normal operations as well as to augment response capabilities for all-hazard disasters on the rail system. Systems include emergency vehicles, modeling system, digital message boards, and redundant communication systems.

**Capital Need Justification**
Enhances the transportation operations and emergency management capabilities of SFMTA.

**Capital Need Estimated Cost**
| % of Total Capital Program | $25.2 M | 4.6% |

**Capital Need Timeframe**

**Capital Need Impact**
Enhance

**Capital Need Characteristics**

Subway Tunnel Intrusion Detection and Deterrence Measures | CN-SC05

**Capital Need Description**
This capital need funds the procurement, installation, and staff training of an upgraded video-based alert system in our subway that actively monitors and detects intrusions into secured areas. This system would monitor our subway stations, tunnels, platforms, and trackside protection assets. This capital need also funds security enhancements related to more traditional methods of intrusion detection and deterrence such as site hardening, trackside protection reinforcement, lighting, and upgraded sensors.

**Capital Need Justification**
This capital need reduces the potential service disruption and protects SFMTA passengers and employees while complying with regulatory requirements. Intentional or unintentional intrusion into our network has been identified as an issue which poses not only a safety and security risk, but a risk to the overall service delivery of the organization.

**Capital Need Estimated Cost**
| % of Total Capital Program | $297.2 M | 54.6% |

**Capital Need Timeframe**

**Capital Need Impact**
Enhance

**Capital Need Characteristics**

Surveillance, Access Control, and Security System Enhancements | CN-SC03

**Capital Need Description**
Annual high-priority security enhancement measures such as perimeter security enhancements, surveillance equipment, video analytics and monitoring, employee security access control, equipment, signs, manuals, and cyber security systems.

**Capital Need Justification**
Maintains the security of SFMTA facilities as mandated by regulations.

**Capital Need Estimated Cost**
| % of Total Capital Program | $15 M | 2.8% |

**Capital Need Timeframe**

**Capital Need Impact**
Enhance

**Capital Need Characteristics**

Market Street Natural Hazard Mitigation | CN-SC06

**Capital Need Description**
Implementation of the San Francisco Lifelines Council’s recommendations outlined in the San Francisco Lifelines Council Interdependency Study to mitigate risks from natural hazards to SFMTA infrastructure assets above and below Market Street. Mitigation recommendations primarily are concerned with earthquake, but also recognize the significant impact of earthquake related flooding and fire. These mitigation strategies include but are not limited to subway, surface rail, electric sub-station, and trolley bus related infrastructure.

**Capital Need Justification**
The SF Lifelines Council is a private/public partnership sponsored by the San Francisco Office of Resilience and Recovery. The purpose of the Council is to focus on post-disaster reconstruction and recovery efforts. The “Interdependency Study” identified Market Street Corridor where many major components of many lifeline systems are collocated and interdependent. The corridor also represents an area of Very High to Moderate risks of liquefaction. The study recommends coordinating post-disaster action plans in coordination with partner Lifeline Council members. SFMTA would work closely with other City agencies as well as BART and other regional transit partners.

**Capital Need Estimated Cost**
| % of Total Capital Program | $100 M | 18.4% |

**Capital Need Timeframe**

**Capital Need Impact**
Enhance

**Capital Need Characteristics**
## Security Capital Needs

### Subway Flooding Prevention, Preparedness, and Mitigation  |  CN-SC07

**Capital Need Description**
Conduct an all-hazard review of the SFMTA subways to prevent, prepare, and mitigate risks, primarily of flooding. A systemwide review is needed every 5 to 10 years.

**Capital Need Justification**
Maintains the integrity of SFMTA assets and prevents service disruption in the event of major natural disasters.

| Capital Need Timeframe | 2023 | 2028 | 2038 | 2018 |

### Continuity of Operations  |  CN-SC08

**Capital Need Description**
Implement measures to ensure that the SFMTA would continue its essential functions after a major disaster. An immediate need would be to set up a fully functional Department Operation Center for coordinating rail and bus operations in a post-disaster situation.

**Capital Need Justification**
Maintains essential SFMTA operations in the event of a major disaster.

| Capital Need Timeframe | 2023 | 2028 | 2038 | 2018 |

### Traffic Signal Battery Backup System  |  CN-SC09

**Capital Need Description**
Replacement or expansion of traffic signal battery backup system installed in FY17 or earlier. The useful life of the current backup system is about five years at this time.

**Capital Need Justification**
Maintains traffic safety after a major power outage or natural/manmade disaster. Costs are offset by the otherwise need for PCOs staffing intersections and controlling traffic.

| Capital Need Timeframe | 2023 | 2028 | 2038 | 2018 |
STREETS

Plan, design, engineer and construct improvements to street safety that promote walking, bicycling and taking transit.

San Francisco is a national leader in complete streets design that accommodates all transportation modes and prioritizes safety for vulnerable users. In order to streamline the capital funding process for this work, we’ve chosen to unify the former Pedestrian, Bicycle, Traffic Calming, and School capital programs into a more integrated and diverse Streets Program that will invest in capital projects to make our streets safe, vibrant and enjoyable places to walk and bike.

The Capital Needs expressed in this program are based on consistency with the Vision Zero Goal of eliminating traffic deaths and providing infrastructure that supports the mode shift detailed in the SFMTA’s Bicycle Strategy. Realizing the scope of these Capital Needs would provide San Francisco with a complete network for bicycling, provide necessary bicycle parking, as well as address the High Injury Network with pedestrian safety projects and provide traffic calming on local streets.

9 CAPITAL NEEDS, $2,456M SCOPE

• Improved street safety for all users

• A complete bicycle network, bike parking, and implementation of the Bicycle Strategy

• Safer streets through Traffic Calming projects on residential streets that are both driven by resident request and proactively identified
Streets Capital Needs

Bicycle Parking (Program)

Capital Need Description
Includes the installation of 1,000 bicycle racks per year (e.g., sidewalk racks, on-street racks); wheel stops; bollards; corrals and other measures to facilitate bicycle parking at various locations throughout San Francisco. Also includes the installation of 7 bicycle parking stations, one every three years, which are self-service or attended facilities that have controlled access for secure storage of a bicycle; and the installation of 100 bicycle lockers, 8 per year. Secure bicycle lockers provide flexible, shared use, on-demand bicycle parking options.

Capital Need Justification
These facility improvements serve the entire system through the provision of safe, convenient bicycle parking so that cyclists can access desired land uses at the end of their trips. These facilities serve the entire system by providing for bicycle storage needs, making bicycle transportation a safer, more viable, attractive mode in San Francisco.

 Protected Bike Lane Network

Capital Need Description
Add new protected bike lanes and upgrade existing Class II bike lanes to physically protected facilities to create a citywide network of protected bike lanes suitable for a wide range of users. Specific protected bike lane infrastructure includes transit boarding islands to provide protection from bus passenger loading, concrete barriers to separate traffic from people bicycling, and signal and signage upgrades to increase easy of bicycling.

Capital Need Justification
Protected bike lanes add to the comfort of bicyclists and make San Francisco's bicycle infrastructure more accessible to a wider range of users. This adds the SFMTA's strategic goal of making sustainable modes of transportation the preferred means of travel.

Neighborway Network

Capital Need Description
Provide a network of safe and comfortable local streets to connect people walking and biking to schools, parks and other local destinations. Specific improvements include new traffic signals and signage to facilitate bicycle travel, and concrete infrastructure like islands, speed humps, and traffic circles to slow down vehicle speed.

Capital Need Justification
Neighborways reduce the speed and amount of automobile traffic on local streets thereby promoting the residential character of these streets and making them more accessible to bicyclists.

Bicycle Network State of Good Repair (Program)

Capital Need Description
Replace signs, striping, green pavement, bike signals, and other bicycle facilities. Includes Spot Improvement upgrades to ensure that bicycle facilities are upgraded to meet evolving best practices.

Citywide Pedestrian Core Projects

Capital Need Description
Pedestrian Core Projects will implement the key infrastructure needed to meet the City’s Vision Zero goals, using proven pedestrian countermeasures at the highest need locations. The work will be guided on the City’s high injury network, and range from intersection improvements such as bulb-outs to major corridor transformations.

Capital Need Justification
Implementing these projects are the cornerstone of the City’s Vision Zero program. The focus in this category on the highest need streets will make streets safer and more accessible for all users, specifically vulnerable citizens - seniors, people with disabilities, and children, who are more likely to be severely injured if involved in collisions. Increasing walking by improving street safety results in many benefits, not only for individual health, but also for economic development, neighborhood vitality, and environmental sustainability. The projects will reduce injuries and collisions City-wide, but especially in high-risk communities such as the Tenderloin.

Citywide Pedestrian Full Build-Out

Capital Need Description
This category enhances the existing pedestrian environment and builds on the core pedestrian safety projects by focusing on improving streets to make them more walkable. Projects include walkability improvements on neighborhood connections, such as wider sidewalks and green infrastructure, especially where people already walk. It further builds on local neighborhood corridors to promote walking and economic development, tapping into economic potential. Lastly, this category targets infrastructure deficiencies - locations where there are not high injuries but there are major impediments or barriers to walking, such as highway underpasses, railroad crossings or lack of sidewalks in areas experiencing (and targeted for) new growth.

Capital Need Justification
In addition to safety, the SFMTA is committed to making walking a preferred mode choice. The focus on this category is to make key streets more walkable to increase the number of trips made by walking in the City. This is through improving existing streets where people walk, improving local neighborhood shopping corridors and reducing the number of infrastructure real or perceived barriers to walking.

Citywide Pedestrian Full Build-Out

| CN-ST02 |
| CN-ST03 |
| CN-ST05 |
| CN-ST06 |
| CN-ST07 |
Streets Capital Needs

Traffic Calming - School Streets  | CN-ST08

Capital Need Description
This program takes a proactive approach to traffic safety on local streets around schools across San Francisco. Provides for the evaluation, design, and implementation of context-specific traffic calming measures around public, private and charter schools in San Francisco. Traffic calming measures range from improved signals and signage to pedestrian bulbs and streetscape measures, to in-road treatments such as speed humps.

Capital Need Justification
These projects will improve pedestrian and bicycle safety, and promote walking and cycling for all school aged children in San Francisco.

Traffic Calming - Application Based Local Streets  | CN-ST10

Capital Need Description
The application-based Traffic Calming Program responds to resident concerns about traffic safety and neighborhood livability to evaluate requests and design traffic calming projects on local streets across San Francisco. Traffic calming devices such as speed humps, pedestrian bulb-outs, traffic circles, median islands are considered and installed at various locations in the city. Some of the more intensive traffic calming projects may include features such as chicanes, traffic diverters, signalized pedestrian crosswalks and street closures. Program is comprised of Application-Based Residential Traffic Calming, and Proactive Residential Area Improvement sub-programs. Public spaces can also be created or enhanced by traffic calming projects.

Capital Need Justification
Traffic calming projects improve safety and neighborhood livability by reducing speeding on local streets in neighborhoods. These projects also enhance the comfort of people walking and bicycling.

Traffic Calming - Proactive Local Streets  | CN-ST11

Capital Need Description
The Proactive Traffic Calming Program will supplement the application-based program by targeting the city’s most vulnerable populations from traffic safety by proactively identifying local streets for evaluation and potential traffic calming treatment based on a determined criteria, but without waiting for a citizen petition. The Proactive Program will be data-driven, like the application-based program, ensuring that the local streets with the greatest degree of impacts from vehicular speeding will be addressed. Locations around schools, senior citizen facilities and parks are expected to be the geographic focus for this program.

Capital Need Justification
Traffic calming projects improve safety and neighborhood livability by reducing speeding on local streets in neighborhoods. These projects also enhance the comfort of people walking and bicycling.
TAXI

Plan, design, construct and implement improvements to the taxi system to improve taxi operation and enhance customer experience.

The Taxi Program strives to make comfortable, efficient, and environmentally friendly taxis available throughout the city. Program funds are used to plan, design, and implement improvements to the taxi system and to provide a better customer experience for all taxi users. The Taxi Program also includes initiatives to reduce the environmental impact of taxi use, such as promoting electric vehicles. The Taxi program also strives to assist the SFMTA’s non-fixed route paratransit services.

Capital Needs expressed in this program would make our Taxi fleet more accessible to the senior and disabled communities as well as users that need to transport bicycles. These Capital Needs would also provide improved facilities for taxi drivers to support them in providing excellent non-fixed route service for the City of San Francisco.

7 CAPITAL NEEDS, $65M SCOPE

• Improved customer experience

• Expansion of facilities to support taxi drivers

• Rebate programs for clean fuel and accessible vehicles
### Accessible Taxi Rebate Program
**Capital Need Description**
Establish a rebate program for new purpose built accessible vehicles purchased by companies or medallion holders to incentivize the purchase of wheelchair accessible vehicles. This program will subsidize costs for one of the more expensive vehicle types in the taxicab fleet which provides arguably one of the most important services. Greater incentives may be provided to operators willing to purchase alternative fuel accessible vehicles.

**Capital Need Justification**
Improve mobility options for those unable to use other transportation options for some or all trips. The MTA views transportation vehicles as capital investments, the need to offer accessible vehicles therefore is a capital expense as is needed for capital expense to assist the purchase and availability of accessible vehicles.

### Bicycle Racks For Taxis
**Capital Need Description**
This will start as a pilot program, providing bicycle racks to willing drivers. The program will then expand to ensure that every taxi vehicle will have bicycle racks.

**Capital Need Justification**
This allows for taxis to better serve multi-modal connections, allowing those who own or rent bicycles a higher connectivity to the rest of San Francisco.

### Implement Taxi Driver Rest Stops
**Capital Need Description**
Construct taxi operator break facilities implemented across the city. Ranging from parklets, restrooms, or other facilities to improve taxi driver break conditions.

**Capital Need Justification**
This installation would provide multiple benefits, including: 1) provide a rest stop to the drivers, 2) disperse taxis throughout the city, and 3) act as a pseudo-taxi stand.

### Increase Taxi Stands
**Capital Need Description**
In an effort to increase service to the outer city, 15 additional taxi stands will be established around major hail hubs to better manage and direct taxi flow and utilization.

**Capital Need Justification**
Taxi stands establish locations so that taxis can be easier found throughout the city and aids in movement throughout the city for individuals or groups who chose, or require, taxis as their travel mode.

### Taxi Clean Fuel Rebate Program
**Capital Need Description**
Rebate program to incentivize the purchase of clean fuel vehicles. Greater incentives are provided to operators willing to purchase the cleanest vehicles available.

**Capital Need Justification**
In an effort to make a 100% green taxi fleet; the SFMTA offers drivers a rebate incentive for the purchase of a clean fuel vehicle. This incentive is given to offset the increased costs of purchasing a non-clean fuel vehicle.

### Taxi Management System
**Capital Need Description**
Provide funding for the creation and implementation of a fleet management system for taxicabs. This system would include the ability to monitor vehicle location, affiliation, insurance and inspection status. There will also be an interface that allows the system to integrate driver information from other databases which will allow staff to track driver history, complaints, and compliments as well as allow staff to issue real-time citations to drivers in the field. There will also be a function that allows drivers and taxi companies to pay fees through various user interface portals.

**Capital Need Justification**
This project will help streamline taxicab regulation management by allowing multiple functions to be managed in one database through one system. Currently there are numerous databases and paper files to track activity in the industry including vehicle management, and as the industry expands it is becoming increasingly difficult to manage the growth through paper files.
Taxi Capital Needs

Taxi Toplight Improvement | CN-TA08

Capital Need Description
Provide new toplights that will give taxi vehicles higher visibility and a pooling feature. Taxis would operate to augment existing overburdened transit service to focus on common origins/destinations. Taxis would be provided Scrolling LED lights to indicate the Cab-Pooling service. Drivers will then utilize a standard rate and drive along established set pickup locations. The driver will then pick-up as many riders along the route and drop off riders at any point along the route, allowing a faster, more flexible transportation alternative if you require a seat, storage, or are in a rush.

Capital Need Justification
Toplights will clearly communicate taxi availability and increase driver and passenger safety, efficiency, and emulate the unique look and feel of San Francisco.

Capital Need Timeframe

Capital Need Estimated Cost | % of Total Capital Program
$2.4 M | 3.7%

Capital Project Impact
Expand
TRAFFIC SIGNALS

Plan, design and construct traffic signals and related infrastructure to make streets safer, improve mobility and decrease transit travel time.

Traffic signals are integral to the smooth functioning of the transportation system. The Traffic Signals Program provides funding for upgrading, replacing and constructing new traffic signals and signal infrastructure. Some of San Francisco’s traffic signals and supporting infrastructure is over half a century old. Modernizing these systems to better manage traffic flow will result in time and money savings for people across every mode of transportation.

The SFMTA is replacing outdated signals with Intelligent Transportation Systems (ITS) tools to enhance traffic analysis, provide transit signal priority, and expedite maintenance procedures. The Traffic Signals Program also funds the design and construction of new and upgraded traffic signals to improve safety and help the city reach its Vision Zero goal of eliminating all traffic fatalities and severe injuries by 2024. Upgrading and replacing signals and signal infrastructure will decrease travel time, improve mobility, and increase the safety of San Francisco roadways.

6 CAPITAL NEEDS, $576M SCOPE

- Traffic signal visibility improvements
- Support of transit signal priority projects
- Pedestrian Countdown Signals and Audible Pedestrian Signals for a safer pedestrian environment
## Traffic Signals Capital Needs

### Automated Photo Traffic Enforcement

**Capital Need Description**
Provides for the replacement of obsolete analog wet-film photo enforcement systems with new digital photo enforcement systems at 12 existing approaches and the addition of digital photo enforcement systems at 10 new approaches. These existing approaches include red light and turn restriction enforcement. New approaches could include either red light or turn restriction enforcement and, if approved by state legislature, could include speed enforcement.

**Capital Need Justification**
Automated Photo Enforcement systems improve intersection safety by improving compliance, reducing the number of vehicle crashes. Established systems include red light photo and illegal turn enforcement. Others, like speed, require state legislature approval.

### Signal and Sign Infrastructure State of Good Repair (Program)

**Capital Need Description**
Encompass upgrades of existing traffic control devices, including modifications to existing signals that lack a pedestrian countdown feature, mast arms, 12” signals, battery backup systems, compatible pedestrian signals, wireless detectors, or related amenities. The project also includes the upgrade or replacement of signal equipment that is at the end of its useful life (50 years). Funded sign work in this category includes pavement marking installations and the graffiti program, where existing signs are replaced with signs that have higher reflectivity, and a coating that eases graffiti removal.

**Capital Need Justification**
Support the Vision Zero project to improve safety at crash or other problem locations. This project reduces vehicle delays, travel time and injuries by improving traffic control, often where STOP signs are inappropriate, i.e., due to traffic volumes, intersection configuration, and other such factors.

### Traffic Management State of Good Repair (Program)

**Capital Need Description**
This includes the replacement and repair of existing faded or damaged traffic paint markings/striping such as lane lines and crosswalks, as well as traffic control curb painting such as red curb zones.

**Capital Need Justification**
Maintaining existing infrastructure in a state of good repair will help ensure a safe and reliable street network.

### New Signals & Signs (Program)

**Capital Need Description**
Provides for installation of new traffic signals, signs, pavement markings and related traffic control hardware, with an emphasis on new locations. Over a 20-year period, this program anticipates installing a mix of 19 new signals and/or flashing beacons every other year and 1,000 new signs per year.

**Capital Need Justification**
Support the Vision Zero project to improve safety at crash or other problem locations. This project reduces vehicle delays, travel time and injuries by improved traffic control, often where STOP signs are inappropriate, i.e., due to traffic volumes, intersection configuration, and other such factors.

### SFgo (Program)

**Capital Need Description**
This citywide intelligent transportation management system gathers and analyzes real-time information on current transit and auto traffic flow and congestion; responds to changes in roadway conditions; provides transit priority and emergency vehicle preemption; disseminates real-time traveler and parking information to the public; facilitates the management of special events; and enhances day-to-day parking and traffic operations. It will significantly improve obsolete and deteriorating traffic signal communications facilities, and will implement a number of Intelligent Transportation System (ITS) technologies.

**Capital Need Justification**
The SFgo Program will replace obsolete and deteriorating traffic signal communications facilities and provide real-time information on current transit and auto traffic to improve transit flow and reliability.

### Transit Only Red Lane Replacement

**Capital Need Description**
This need covers the ongoing replacement and renewal costs of the SFMTA Transit Only Red Lanes. This assumes that 12 new miles of red lanes will be built every five years as well as a 20% contingency of cost escalation every five years.

**Capital Need Justification**
Transit Only Red Lanes improve transit travel time and reliability for Muni riders. Timely replacement of these transit only red lanes ensures that they may serve their intended purpose.

```
TRANSIT FIXED GUIDEWAY

Plan, design, engineer and construct improvements to critical infrastructure including rail track, overhead wires and train control technology.

Muni’s fixed guideway systems, which include light rail, trolley coach, streetcar, and historic cable car lines, are a crucial component of San Francisco’s transportation infrastructure. With over 99 miles of track and approximately 206,950 daily customers, vehicles on fixed guideway routes carry nearly 30% of Muni’s daily ridership.

Capital Needs in the Transit Fixed Guideway capital program help to maintain, replace, and enhance these services, including investing in new train control technology, replacing track, upgrading maintenance facilities, and maintaining Muni’s 243 miles of overhead wires.

Key Fixed Guideway Capital Needs over the next twenty years include replacing worn track trolley wire and trolley poles on the K & M, and N lines, reconstructing substations, and replacing or rehabilitating Overhead and Traction Power and Cable Car System assets. These Capital Needs will help to make the Fixed Guideway system more reliable, safe and comfortable for the approximately 206,950 daily passengers who currently rely on fixed guideway routes.

10 CAPITAL NEEDS, $1,310M SCOPE

• Fixed Guideway Track Replacement

• Substation Reconstruction

• Automatic Train Control System Rehabilitation
Transit Fixed Guideway Capital Needs

Automatic Train Control System State of Good Repair (Program) | CN-TF01

Capital Need Description
Provides for the phased rehabilitation and replacement of the Automatic Train Control System (ATCS). The current system was implemented in 1989, and technology has changed significantly. The program will include improvements to the current infrastructure such as updating the main Vehicle Control Center (VCC) computer system, upgrading station controllers to support current and future technology, and updating the loop cable system to modern equipment that is less susceptible to cuts. This program would also include future improvements to technology that would improve service delivery and safety.

Capital Need Justification
A proper functioning ATCS is vital to the day-to-day operations of the San Francisco transit system. Without the ATCS trains in the Muni Metro Tunnel would be required to operate manually which increases travel time and reduces overall capacity of the Muni Metro Tunnel and the overall Muni System. Muni Metro travel time reliability is directly reliant on a functional ATCS.

Capital Need Estimated Cost | % of Total Capital Program | Capital Project Impact
$250 M | 19.1% | Restore

Capital Need Timeframe
2018 2028

Capital Need Characteristics

Overhead and Traction Power System Rehabilitation (Program) | CN-TF06

Capital Need Description
Provides for the rehabilitation, replacement, and improvement of all components of the existing Muni overhead catenary system (OCS) and traction power infrastructure to support electrically-powered trolley coaches, light rail vehicles, and historic streetcars. This includes overhead wires, support poles, switches, substations, feeders, related hardware, underground infrastructures, communications, power cables, and SCADA.

Capital Need Justification
The primary focus of this program is to maintain the overhead system in a state of good repair by replacing components that have reached the end of their useful life.

Capital Need Estimated Cost | % of Total Capital Program | Capital Project Impact
$250 M | 19.1% | Restore

Capital Need Timeframe
2018 2028

Capital Need Characteristics

Cable Car Infrastructure State of Good Repair (Program) | CN-TF02

Capital Need Description
Covers a wide variety of cable car infrastructure needs. Projects include: upgrades to the cable car barn; tuneable rehabilitation at Powell and Market, Victoria Park, and Bay and Taylor; track switch replacement; safety upgrades; tangent track/visor replacement; depression beam replacement; crossover installation at Powell and Market; cable rewinder and holdback replacement; cable propulsion upgrade; and other projects as needed.

Capital Need Justification
To replace track work, machinery, and communications equipment improve overall safety and increase the likelihood of attaining operational performance standards by providing updated and modern equipment which cable cars utilize.

Capital Need Estimated Cost | % of Total Capital Program | Capital Project Impact
$210 M | 16% | Restore

Capital Need Timeframe
2018 2028

Capital Need Characteristics

N-Line Rail Replacement between Arguello/Carl and La Playa | CN-TF07

Capital Need Description
This project is to replace 3.5 miles of worn tangent track, trolley wire and trolley poles for the N-Judah LRV line west of Arguello and Carl. Replace special trackwork including: Curved track located at Arguello/Carl, 9th/Irving, 9th/Judah, and La Playa/Judah; Single crossovers at 20th/Judah, 37th/Judah, 40th/Judah; Turn out track at 30th/Judah; Spur track at La Playa/Judah; Updating 26 boarding islands, street lighting, traffic signals, ADA improvements, water and sewer upgrades will also be encompassed by this project. This scope may change if other locations become a higher priority to be addressed instead of those listed here as informed by ongoing inspection and analysis.

Capital Need Justification
The N-Line is an important part of the Muni transit network. The state of good repair of this railway ensures that trains may continue to run in a timely and efficient manner and provide maximum comfort for Muni customers.

Capital Need Estimated Cost | % of Total Capital Program | Capital Project Impact
$233 M | 17.8% | Restore

Capital Need Timeframe
2018 2028

Capital Need Characteristics

Rail State of Good Repair (Program) | CN-TF04

Capital Need Description
Provides for the phased design and replacement of the trackway and related systems serving the light rail lines. Projects under this program include rail replacement, rail grinding, switch machine replacement, special trackwork replacement, track fastener replacement, tunnel infrastructure repairs and replacement, train signal upgrades, other electrical and mechanical improvements, and other work required to maintain non-traction power rail infrastructure. This program includes construction projects and a proactive replace in kind program for smaller projects.

Capital Need Justification
The primary focus of this program is to maintain the light rail and cable car trackways in a state of good repair by replacing components that have reached the end of their useful life.

Capital Need Estimated Cost | % of Total Capital Program | Capital Project Impact
$125.5 M | 9.6% | Restore

Capital Need Timeframe
2018 2028

Capital Need Characteristics

Substation Reconstruction | CN-TF08

Capital Need Description
The substations of West Portal, Laguna Honda, Church, Civic Center, Carl, Bryant, Station J, Judah, Outer Mission, Taraval, and Downtown are close to or beyond their design lives.

Capital Need Justification
This will update the aging traction power substations to improve the reliability of the system which is important in maintaining Muni rail service in a state of good repair in order to continue to serve our customers. The substations are a critical component of our system as they provide the power to operate the Light Rail System.

Capital Need Estimated Cost | % of Total Capital Program | Capital Project Impact
$154 M | 11.8% | Restore

Capital Need Timeframe
2018 2028

Capital Need Characteristics
Transit Fixed Guideway Capital Needs

K & M-Lines

Capital Need Description
One project is to replace approximately 1 mile of worn tangent track, trolley wire and trolley poles for the M-Line from Broad/Plymouth to San Jose/Ocean including curved tracks located at San Jose/Broad, San Jose/Farallones, San Jose/Mt. Vernon & Niagara; single crossovers at San Jose/Niagara and at Broad/Plymouth; turnouts at San Jose/Ocean(1), San Jose/San Jose(1), San Jose at Cameron Beach Yard (2); updating 4 low level boarding islands and 1 key stop; construct 1 new key stop; and new street lighting, traffic signals, ADA improvements, water and sewer upgrades. The other project is to replace about a half mile of worn tangent track, trolley wire and trolley poles on West Portal Ave from Ulloa to 15th Ave. Updating 2 boarding islands and street lighting, traffic signals, ADA improvements, water and sewer upgrades will also be encompassed by this project. This scope may change if other locations become a higher priority to be addressed instead of those listed here as informed by ongoing inspection and analysis.

Capital Need Justification
The K- and M-Lines are an important part of the Muni transit network. The state of good repair of this railway ensures that trains may continue to run in a timely and efficient manner and provide maximum comfort for Muni customers.

Capital Need Estimated Cost
$144.1 M | 11%

Automatic Train Control System VCC Backup

Capital Need Description
Design and installation of redundant VCC system for ATCS. VCC is currently the brain of the ATCS system and is located at West Portal on Lenox Avenue. Any major failure would cause significant service impacts in the subway. A second VCC located downtown at the TMC in hot standby mode would provide critical backup capability in the event a system failure at Lenox.

Capital Need Justification
A proper functioning ATCS is vital to the day-to-day operations of the San Francisco transit system. Without the ATCS trains in the Muni Metro Tunnel would be required to operate manually which increases travel time and reduces overall capacity of the Muni Metro Tunnel and the overall Muni System. Muni Metro travel time reliability is directly reliant on a functional ATCS.

Capital Need Estimated Cost
$44 M | 3.4%

Automatic Train Control System Wiring Replacement

Capital Need Description
Replacement of critical ATCS wiring components. This work includes replacement of ATCS VCC to SCS, axle counter wiring, and intrusion wiring.

Capital Need Justification
A proper functioning ATCS (Automatic Train Control System) is vital to the day-to-day operations of the San Francisco transit system. It is the system that controls train movements within the subway and allows the trains to operate at optimal and safe headways. Without the ATCS trains in the Muni Metro Tunnel would be required to operate manually which increases travel time and reduces overall capacity of the Muni Metro Tunnel and the overall Muni System. Muni Metro travel time reliability is directly reliant on a functional ATCS.

Capital Need Estimated Cost
$27 M | 2.1%
TRANSIT OPTIMIZATION & EXPANSION

Plan, design, engineer and construct capital projects to optimize and expand Muni service for greater connectivity.

The SFMTA is currently embarking on an ambitious plan to make Muni more efficient, reliable, safe, and comfortable for its existing 700,000 daily passengers – as well as to prepare the system for future growth. The Capital Needs listed here such as Muni Forward ensure the continued streamlining and expansion of transit resources so that the Agency may continue to provide excellent service to its customers. These Capital Needs also address making Muni Metro Stations more convenient for all users and prioritize transit through Transit Signal Priority and other programmatic enhancements as discussed in the Rail Capacity Strategy.

This Capital Program details the Bus Rapid Transit, Light Rail, and Subway Projects on Geary Blvd, Geneva and 19th Avenue, as well as to Fisherman’s Wharf and Fort Mason. These projects will support San Francisco’s Transit First policy as the city continues to grow. As the 2019 Capital Plan integrates the work of ConnectSF, this list of projects may increase or change slightly.

16 CAPITAL NEEDS, $8,046M

SCOPE

- Faster Muni Service
- Transit First Streets
- Upgraded Stations & Transit Stops
## Transit Optimization & Expansion Capital Needs

### Muni Subway Extension Project

**Capital Need Description**
The proposed project would: 1) Construct new light-rail tunnel between West Portal and Parkmerced to improve the Muni Metro M-line's speed, reliability, and capacity; 2) Re-design 19th Avenue between Eucalyptus and Brotherhood with wider sidewalks, a bike path separated from traffic, and new trees and landscaping.

**Capital Need Timeframe**

<table>
<thead>

<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Capital Need Estimated Cost | % of Total Capital Program**

| Cost | $3,000 M | 1.9% |

**Capital Need Justification**
These improvements are anticipated to make Muni Metro a more reliable and attractive option for existing riders and attract new riders. These improvements are also anticipated to make 19th Avenue feel safer and more comfortable for everyone who travels along this street, including people walking, cycling, driving, and riding transit.

### Better Market Street

**Capital Need Description**
Includes planning, conceptual engineering, environmental review, public outreach and construction of the Better Market Street Project. Concepts will be developed and evaluated for urban design of sidewalks and boarder islands, transit facilities and operations, pedestrian facilities (e.g., crosswalks), new traffic signals, and bicycle facilities. The study area is roughly bounded by blocks just north of Market St., Mission St., Octavia Blvd. and Stuart St. $365 Million has already been allocated for this project in the FY17-21 CIP. The total estimated cost of this project is $406 Million.

**Capital Need Timeframe**

<td></td>
</tr>
</tbody>
</table>

**Capital Need Estimated Cost | % of Total Capital Program**

| Cost | $365 M | 1.9% |

**Capital Need Justification**
This project will improve the quality of the public realm and optimize sustainable mobility modes (transit, walking and cycling), so that they are pleasant, reliable, efficient and comfortable for all users.

### Historic Street Car Expansion

**Capital Need Description**
Consists of two separate projects. One project creates a northern terminal that consists of an independent E-Line track loop & terminal that allows for operational independence of the F-Line, including layovers, from E-Line service. The second project extends the current terminal west from Fisherman's Wharf to the Fort Mason Center through an abandoned railroad tunnel underneath Fort Mason. The E-Line would likely operate along this extension. The F-Line extension would cost approximately $100M, and the E-Line track loop would cost approximately $10M.

**Capital Need Timeframe**

<table>
<thead>
<tr>
<th>Year</th>
<th>2023</th>
<th>2024</th>
<th>2025</th>
<th>2026</th>
<th>2027</th>
<th>2028</th>

<td>$200 M</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Capital Need Estimated Cost | % of Total Capital Program**

| Cost | $200 M | 1.3% |

**Capital Need Justification**
E-Line service is a component of the planned TEP service improvements and will serve the projected growth in trips along the waterfront area. A northern terminal is needed to provide the operational flexibility required for overlapping E-Line and F-Line services. A Fort Mason terminal provides access to Fort Mason and areas to the west, which have limited transit access options.

### Geary Boulevard Improvement Project

**Capital Need Description**
The project would provide for the operational flexibility needed to meet long-term rail service needs.

**Capital Need Timeframe**

<table>
<thead>
<tr>
<th>Year</th>
<th>2023</th>
<th>2024</th>
<th>2025</th>
<th>2026</th>

<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Capital Need Estimated Cost | % of Total Capital Program**

| Cost | $610 M | 7.6% |

**Capital Need Justification**
This project would increase pedestrian safety, service reliability, passenger capacity, passenger comfort and attractiveness and reduce travel time along the corridor.

### Geneva Avenue Light Rail Transit Extension

**Capital Need Description**
Entails extending light rail track 2.7 miles along Geneva Avenue from the Green Railyard to Bayshore Boulevard and then to the existing T-Third terminus at Sunnydale Station. Operations would occur at-grade with station locations to be determined.

**Capital Need Timeframe**

<table>
<thead>

</tr>
</tbody>
</table>

**Capital Need Estimated Cost | % of Total Capital Program**

| Cost | $2,000 M | 24.9% |

**Capital Need Justification**
This project will provide a higher capacity service along the corridor, providing passengers with improved speed, reliability and comfort.
Transit Optimization & Expansion Capital Needs

Geneva/Harney Avenue Bus Rapid Transit | CN-TO08

**Capital Need Description**
The project will implement BRT service from Balboa Park BART to the Hunters Point Transit Center, including bus-only lanes and transit signal priority along Geneva Avenue in the Cities of San Francisco and Daly City, Harney Way and Crrop Road. This BRT service may be operated partly as an extension of the 28 Rapid service, which would provide a one-seat connection between major SE San Francisco residential and employment development areas, the two largest college campuses in San Francisco, and regional retail centers. A second route would be added as demand warrants to provide more frequent service between City College, Balboa Park BART and the Hunters Point Transit Center.

The Geneva-Harney BRT project will link existing neighborhoods and planned developments, including the Candlestick Point/Hunters Point shipyard project to the Bayshore Caltrain Station, Balboa Park BART, and the Muni Metro T-Third line. Enhancements to improve bicycle and pedestrian safety and accessibility will be made throughout the BRT Corridor. $30 Million has already been allocated for this project in the FY17-21 CIP. The total estimated cost of this project is $102 Million.

**Capital Need Justification**
This project will provide new and expanded transit capacity to accommodate new development growth areas, reduce transit travel time and improve transit reliability. The project will provide service on a corridor that connects regional transit services, Priority Development Areas, and the Candlestick Point/Hunters Point Shipyard Development.

**Muni Forward Capital Projects | CN-TO09**

**Capital Need Description**
Muni Forward aims to make getting around San Francisco safer and more reliable by creating a Rapid Network, improving reliability, using state-of-the-art technology to make the system run better, and enhancing safety and access to stops and stations. Muni Forward transit priority projects on the Rapid Network may include adding bus or pedestrian bulbs, transit-only lanes, transit signal priority, and other street design changes to reduce delay for transit and enhance pedestrian safety. The first phase of Muni Forward is already underway, with a 10% service increase in place and over 40 miles of transit priority improvements on the way. During the next phase of Muni Forward transit priority projects, priority will be given to lines 1, 5, 7R, 8, 22, K, and M, then to lines that have high existing or projected ridership, such as the 24, 29, 43, and 44.

**Capital Need Justification**
The improvements result in greater transit travel time reliability and on-time performance. Improved reliability and on-time performance should also result in decreased operational resource needs.

**Role Capacity Strategy: Programmatic Enhancements | CN-TO12**

**Capital Need Description**
The Rail Capacity Technical Panel conducted a line-by-line review of current operational pain points and impediments. While major enhancements were identified along every line, a reasonable delivery timeline for these enhancements given their cost and benefits relative to the prioritized mid- and long-term concepts is beyond the horizon of the Rail Capacity study. However, less significant improvements were identified that would be implemented at a programmatic level as part of regular rail replacement or enhancement projects.

**Capital Need Justification**
The current Muni light rail system was not designed with consideration for flexible service operations or adjustments to service disruptions. The Rail Capacity Strategy Programmatic Enhancements will leverage State of Good Repair investments to provide a necessary increase in the flexibility of both service design and adjustments, and allow for more efficient delivery of service.

**Bayshore Multimodal Facility | CN-TO13**

**Capital Need Description**
The project would construct support facilities to improve transfers near the Caltrain Bayshore Station among Caltrain, the T-Third line, the future Geneva Harley BRT, Muni 8 Bayshore and 9 San Bruno lines, Samtrans bus service, and employee/community shuttle buses and vans. This project would also improve pedestrian/bicycle access to and passenger loading near the Caltrain Bayshore Station. Facilities would include: shuttle/auto passenger loading space and shelters, bicycle parking, bicycle sharing facility, street furniture, landscaping, a plaza, wayfinding signs, information displays and possibly a bicycle/pedestrian path. In the initial stage, the facility would be sited near the Sunnydale Avenue extension east of Bayshore Boulevard being constructed by the Schlage Lock development project. In a potential second phase, this facility could be expanded or even partially relocated to a nearby location to improve Caltrain connections with BRT and T-Third service. In this later phase, vertical and horizontal circulation improvements, ticket/information facilities, and an enclosed waiting area could be added.

**Capital Need Justification**
This project improves connectivity and enhances transit travel options for residents and employees of southeast San Francisco, supporting major planned transit-oriented development and affordable housing. It would address current limited connections among Caltrain, the T-Third light rail line, and Muni bus lines. It would also support efforts to increase Caltrain service at this station, which will increasingly serve as a major regional transit connection with planned growth and Caltrain electrification.
Transit Optimization & Expansion Capital Needs

**T Third Phase 3 to Fisherman’s Wharf**

**Capital Need Description**
Provides for the study and extension of the T-Third rail line approximately 1 mile north, from the planned Central Subway terminal at Stockton/Clay through North Beach and into Fisherman’s Wharf. This project will provide a higher capacity service along the corridor, introducing improved speed, reliability and comfort. Cost estimate ranges from $643M - $2.6B. Future studies might include the Lombard Corridor.

**Capital Need Justification**
Extension would connect Fisherman’s Wharf and North Beach, a regional trip generator and one of the most dense neighborhoods in San Francisco, with efficient and reliable rapid transit service.

**Capital Need Timeframe**
2023 2028 2038 2018

**Capital Need Description**
Provides for the study and extension of the T-Third rail line approximately 1 mile north, from the planned Central Subway terminal at Stockton/Clay through North Beach and into Fisherman’s Wharf. This project will provide a higher capacity service along the corridor, introducing improved speed, reliability and comfort. Cost estimate ranges from $643M - $2.6B. Future studies might include the Lombard Corridor.

**Capital Need Justification**
Extension would connect Fisherman’s Wharf and North Beach, a regional trip generator and one of the most dense neighborhoods in San Francisco, with efficient and reliable rapid transit service.

**Capital Need Timeframe**
2023 2028 2038 2018

**Capital Need Description**
Design and construct 20 new accessible light rail stops at 10 locations that have been identified in the Accessible Key Stop Feasibility Study (M679.0), then continue with other feasible, high-priority locations as they are identified. The program will also replace the wayside lift at San Jose & Geneva with a ramp and platform.

**Capital Need Justification**
This project will improve passenger access to light rail transit, particularly for people with mobility impairments.

**Capital Need Timeframe**
2023 2028 2038 2018

**Capital Need Description**
Implement small light rail and bus and stop improvements to improve accessibility for persons with disabilities. Improvements could include: repair/replacement of damaged railings, signage and attenuators at Key Stops; installation of NextMuni/Push-to-Talk at transit shelters; improving crosswalks, and installing or upgrading curb ramps adjacent to transit stops.

**Capital Need Justification**
This project will improve passengers’ access, wayfinding, and safety to transit stops, particularly for people with mobility impairments.

**Capital Need Timeframe**
2023 2028 2038 2018

**Capital Need Description**
Purchase and deploy Transit Signal Priority (TSP) devices and communications equipment for intersections on the Muni Bus and Rail network. The project includes capital equipment and associated costs, including: vehicle detection loops, conduit, cabinets, controllers and electrical wiring (rail); cabinets, controllers, wireless communication and associated hardware (bus).

**Capital Need Justification**
Transit signal priority has proven to improve travel time and service reliability for Muni riders.

**Capital Need Timeframe**
2023 2028 2038 2018
APPENDIX: COST ESTIMATE SCOPES

The Capital Plan covers the Agency’s Capital Needs over the next 20 years based on what we currently know and can reasonably predict. We are providing additional information in the following appendix to show how the cost estimates were arrived at for some of the Capital Needs presented in the Capital Plan. Due to the nature of many of the Capital Needs, it is not possible to do this with all of the needs presented in this document.
Appendix A: Capital Need Cost Estimate Scopes

**Fleet Capital Need Cost Estimate Scopes**

- **Light Rail Vehicle Fleet Expansion (CN-FT01)** $467,000,000
  Estimated project cash flow for FY2019-2028 plus $21M for Warriors cars plus $280M for 45 car expansion.

- **Rail and Bus Training Simulators (CN-FT02)** $5,000,000
  Estimate based on current price of simulators ($2-2.5M apiece).

- **Historic Vehicle Rehabilitation (CN-FT04)** $113,000,000
  $2.5M per vehicle in 2017 dollars for the full fleet one time during the capital plan cycle.

- **Light Rail Vehicle Midlife Overhauls (CN-FT05)** $484,000,000
  Estimate based on delivery schedule of Siemens LRVs at $2M per car in 2017 dollars.

- **Replace On-Board Fare Collection Equipment (CN-FT07)** $25,000,000
  Capital cost of current contract ($20.4M) plus 10% contingency and sales tax inflated with no escalation.

- **Light Rail Vehicle Heavy Repair Overhaul (CN-FT16)** $535,000,000
  Estimated based on delivery schedule of Siemens LRVs and overhaul of 1/4 of Breda fleet at $750,000 per car in 2017 dollars.

**Parking Capital Need Cost Estimate Scopes**

**Implement Parking Vehicle Detection Technology (CN-PK02)**

</tr>
</tbody>
</table>

**Subtotal** $28,930,096

10% Contingency $2,893,010

**Grand Total** $31,823,106

#### Bicycle State of Good Repair Network (CN-ST05)

- **$6.85M per year**
  - 300,000 sq ft of epoxy green paint per year at $6 per square foot (assumes useful life of 5 years)
  - 50,000 sq ft of thermoplastic green paint per year at $16 per square foot (assumes useful life of 5 years)
  - 400k linear feet of thermoplastic striping per year at $3 per linear foot (assumes useful life of 5 years)
  - $3M per year for routine upgrades and spot improvements to maintain facilities consistent with evolving industry best practices.
  - Counter maintenance $50k per year

**Total cost: $137M**

#### Citywide Pedestrian Core Projects (CN-ST06)

- **$561,500,000**
  - WalkFirst 2013 estimated $240 to meet 50% of injuries + fatalities, doubled to meet 100%, escalated to 2017 at 4% annually.

#### Citywide Pedestrian Full Build Out (CN-ST07)

- **$909,800,000**
  - WalkFirst Streetscape Prioritization 2014, escalated to 2017 $ at 4% annually.

#### Citywide Pedestrian Core Projects (CN-ST06)

- **$561,500,000**
  - WalkFirst 2013 estimated $240 to meet 50% of injuries + fatalities, doubled to meet 100%, escalated to 2017 at 4% annually.

#### Citywide Pedestrian Full Build Out (CN-ST07)

- **$909,800,000**
  - WalkFirst Streetscape Prioritization 2014, escalated to 2017 $ at 4% annually.

#### Traffic Calming - School Streets (CN-ST08)

- **$2,900,000**
  - Cost estimate assumes $15K/school and that 2/3 of SF’s 282 schools receive traffic calming treatments.

#### Traffic Calming - Application Based Local Streets (CN-ST10)

- **$28,000,000**
  - Cost estimate assumes 50 projects per year at cost of $28K per project.

#### Traffic Calming - Proactive Local Streets (CN-ST11)

- **$28,000,000**
  - Cost estimate assumes 50 projects per year at cost of $28K per project.
Appendix A: Capital Need Cost Estimate Scopes

**Taxi Capital Need Cost Estimate Scopes**

**Bicycle Racks for Taxis (CN-TA02) $300,000**
As part of integrating Bike awareness within the SFMTA. An estimate of 10% of taxis will be given bike racks. This capital expenditure represents the cost of the turnover of vehicles during the project timeline encompassing approx 1000 bike racks.

**Implement Taxi Driver Rest Stops (CN-TA03) $10,000,000**
This involves acquisition of space and construction of facilities. Construction estimates of 500k-1M per facility, and market based land acquisition of 500k-2M.

**Increase Taxi Stands (CN-TA04) $200,000**
Spaces range from 5-15k depending on the number of spaces needed for the additional cab stand.

**Taxi Toplight Improvement (CN-TA08) $2,400,000**
Merged with CN15-TX05, approx cost of 1.2k/unit for 2,000 cabs.

**Traffic Signals Capital Need Cost Estimate Scopes**

**Automated Photo Traffic Enforcement (CN-SG01) $7,000,000**
Excludes transit lane or parking enforcement. Estimated $5 Million for red light and turn enforcement programs enhance and expansion. $2M is a placeholder for potential expansion into other traffic enforcement areas not yet approved, like speed enforcement or do not block box enforcement.

**Signals and Sign Infrastructure State of Good Repair (CN-SG02)**

Assumes 20% contingency 5 year to 5 year

Transit Optimization and Expansion Capital Need Cost Estimate Scopes

Muni Forward Capital Projects (CN-TO09)

Includes 47 miles of Muni Forward Projects on the following lines,
Transit Priority Projects:
- 1 - Downtown & Outer
- 5 - 6th Ave to 25th Ave (Mid Route)
- 7 - Outer
- 22 - Fillmore Street
- K - Ocean Ave
- K/M - West Portal Ave
- M - Oceanview
- 24 - Divisadero
- 29 - Sunset
- 43 - Masonic
- 44 - O’Shaughnessy

**Total cost: $200M**
Overall, inflationary growth has raised the scope of many capital needs, and as parts of certain capital needs have been funded or are deemed to be no longer necessary, these capital needs have been reduced. Significant changes in the SFMTA’s Capital Needs from 2015 to 2017 are detailed here and broken down by Capital Program.

**Communications/IT:**
- The Next Generation Customer Information System Capital Need (CN-CI06) as well as CN-CI07 through CN-CI13 were added to the Communications & IT Infrastructure Capital Program.

**Facilities:**
- The 2017 Facilities Framework has been incorporated into this Capital Program.
- The following 2015 Facilities Capital Needs have been funded, are accounted for elsewhere, or are no longer needed such as:
  - Beach Track Rebuild (CN15-FA01)
  - Burke Facility Reconfiguration (CN15-FA02)
  - Cable Car Museum Renovation (CN15-FA04) (now part of CN-FC11)
  - Electronic L.E.D. Signage System – Expansion To NextMuni Program (CN15-FA05)
  - Implement Fall Protection Improvements at Multiple Facilities (CN15-FA07)
  - Install New Operator Convenience Stations (Program) (CN15-FA09)
  - Marin Site – New Use Project (CN15-FA14)
  - Muni Metro East – Build Paint and Body Shop for the Entire Muni Fleet (CN15-FA16) (now part of CN-FC15)
  - Muni Metro East – Historic Streetcar Canopy (CN15-FA17)
  - Muni Metro Station Wayfinding Project (CN15-FA18)
- The Development of a New Motorcoach (CN-FC35) and Paratransit (CN-FC34) Facility has been added.
- Elevator and Escalator Capital Needs (CN-FC31 through CN-FC33) have been added to the Facilities Capital Program.
- SFMTA Facilities Renewal Campaign has been split between Ongoing (CN-FC12) and Backlog (CN-FC36)
- 1 South Van Ness (SFMTA Headquarters) (CN-FC37) has been added to the Facilities Capital Program.

**Fleet:**
- The Capital Needs to expand and overhaul the Light Rail Vehicle Fleet (CN-FT01, CN-FT05, and CN-FT16) have increased in scope.
- Replacement of Other On-Board Equipment (CN-FT17) has been added to the Fleet Capital Program.

**Parking:**
- The 2015 Electric Vehicle Charging Infrastructure Capital Need (CN15-PA01) has not been included in the Parking Capital Program.
- Staff analysis led to a reduction in the Parking Facilities State of Good Repair Program (CN-PK03).

**Security:**
- CN-SC05 through CN-SC09 have been added to the 2015 Capital Plan.
- The Threat and Vulnerability Assessment Implementation Capital Need (CN-SC01) has expanded in scope.

**Streets:**
- The 2015 Bicycle Safety Education (CN15-BI02) and Bike Sharing Program (CN15-BI03) Capital Needs are outside of the defined scope of the 2017 Capital Plan.
- The 2015 Citywide Bicycle Strategy Capital Need has been divided into the Protected Bike Lane (CN-ST02) and Neighborway (CN-ST03) Network Capital Needs.
- The Citywide Pedestrian Core Projects (CN-ST06) and Full Build-Out (CN-ST07) Capital Needs have expanded in scope.
- The Traffic Calming Program Capital Needs (CN-ST08, CN-ST10, and CN-ST11) have decreased in scope.

**Taxi:**
- The Accessible Taxi Rebate Program (CN-TA01), Increase Taxi Stands (CN-TA04) and Taxi Management System (CN-TA07) Capital Needs have decreased in scope.
- The Taxi Cab Pooling Pilot (CN15-TX05) 2015 Capital Need was merged with the Taxi Toplight Improvement (CN-TA08) Capital Need.

**Traffic Signals:**
- Staff analysis led to a reduction in the Signal and Sign Infrastructure State of Good Repair Program (CN-SG02).
- The Transit Only Red Lane Replacement Capital Need (CN-SG06) was added to the Traffic Signals Capital Program.

**Transit Fixed Guideway:**
- Staff analysis led to a reduction in the Overhead and Traction Power System Rehabilitation Program (CN-TF08) as well as the Automatic Train Control System (CN-TF01), Cable Car Infrastructure (CN-TF02), and Rail State of Good Repair Programs (CN-TF04).
- Capital Needs CN-TF07 through CN-TF12 were added to the 2017 Capital Plan. Most of these needs were part of the Capital Needs listed above in 2015.
- The Subway Tunnels Structures State of Good Repair Program (CN15-FG03) is not individually listed in the 2017 Capital Plan.

**Transit Optimization & Expansion:**
- The following Transit Optimization & Expansion Capital Needs have been funded, are accounted for elsewhere, or are no longer needed such as:
  - Arena Transit Capacity Improvements (CN15-TE02)
  - Rail Capacity Strategy: Long-Term (CN15-TE10)
  - Rail Capacity Strategy: Near-Term (CN15-TE11)
- The Muni Subway Expansion Project Capital Need (CN-TE01) expanded in scope.
- Better Market Street (CN-T003), Geary Boulevard Improvement Project (CN-T005), and Muni Forward Capital Projects (CN-T009) have been partially funded.
- CN-T015, CN-T016, and CN-T017 are Accessibility Capital Needs that have been added to the Transit Optimization & Expansion Capital Program.
- Muni Metro Station Enhancements (CN-T018) and Transit Signal Priority (CN-T019) Capital Needs have been added to the Transit Optimization & Expansion Capital Program.
